Saucer Studies
simple

In each current there are particles, we can hear it with a radio, E balls, Which move in the KRW a saucer has ports that come into contact with these balls and the wheel turns manually. each port recharges or discharges at each contact as it where attracted. To run the wheel, a current in the internal discharge or recharge each port and automatically each port calls a ball of E. from a current, to stick to it. Good settings and wheel turns. Each port connected has an battery for for general quantity of E. of the object, elevation, ratio gravitation ? Or the displacement in the KRW is perhaps Peut être puisqu'ellesufficient since it is already a certain elevation. Then Then just be able to change of KRW attracted, reject guiding a mat. To see them, MAP all the time, currents horizontal to the star and more or less verticals, general currents more distant.

These balls are KRW smaller Concentration points R. discovered the distances of them, measurements (with pendulum) kept them I believe in any case loved them very much. Plate or ball, of orientation, distribution and supplied by E. Lacks plasma ball Matter in the inside no containing . Meca

Genes from krw, spinewave
 = buckles crossing the body by taking the form of it, tightening when mixing with the wave of the partner, charging the embryo as is. Later the buckles will be enlarged again in the newborn. (Those who have been the most charged, circulating, in the partners will be the determining factor of the choice of characteristics present in the gene; the helicoid of two buckled up lines reduced in size in the charged germ.) DNA

a

anamole suite

To get it - Life choice, question, ascent cord 'ombical' de stasis, by sexual thought with ,imagining it by visualizing my inverse at the pelvis level (as shown a little before). On a vegetal system, testing a theory based on Gaudichaud vegetal description. If the radicules of the leaves descend along the Cambium, behind the bark, that they cover the old woody (and make the growth of the tree) and if they are twisting around the radices of the ascending system (as shown), why do not not to see me in this place, ascending, letting me cover by the descendants to reach a leaf, perhaps, these descendants would be that I would meet by the feet, which, as would be a particle on these waves in the shape of a radice, like the cell browses, travels in the tree. See the cord, then the previous page figures, then the stem and a knot on it, then the anamole leaf that goes down and swing, without on it.

+ bark on one side and on the other or liquor curb, obstacle to the radices.

humanity bark behind I am in the cambium science solitude looking for the sheet, the flower the fruit, want to go out

cut the branches to him = death of the parts of the bark

There are inside, small balls of bitterness, tights. When you start. That is to say let oneself be penetrated.
+angst that comes back

same for butterfly colored shapes and others are organizer of the e., that is to say, obstacles, channeler etc. Where it goes or not. it goes through buckle. (krw)

Once past all the organs the animal is charged to its maximum, if it mates, what comes out of it is the wave that has traveled his body, (coming from outside) taking its form,

Reducing the buckles, tightening them by concentrating, then superimposes (again), with the wave of the other half..

sperm charge the embryo already there and the mixed wave does the rest, i.e., gives Movement

which is in a good way and turns out to be where the man is, and whatever they want.

reverse for ♂ Defensive buckle (took off by showing it feminine.

= Translation Because she has the impression of fighting against the mother (in truth against the father, the desire for incest, efficiency, etc.)
Because he has the impression of fighting against the dad (authority) (in truth, against the desire for incest with the mother, softness, etc.)

make him fight against the mother, he won't want to,
he fashioned a world of hypocritical sweetness,
feminine value

(gentle being) ♂ because he has the impression of fighting against softness with war.
when in fact he is fighting war with softness
(identification) ♂ show him that he is fighting war with softness
That, he won't want, and will take the war
which will lead to softness (after aggressiveness) (passivity after aggressiveness)

(hard Being) ♀ because she has the impression of fighting the war with softness.
when in fact she fights sweetness with war
(war = aggressivity) ♀ show her that she is fighting softness with war
That, she won't want, and will take the sweetness
which will lead to war (after passivity) (aggressiveness after passivity)

essay

AE

It is about of finding at which moment the two currents, the galactic and that of the Earth, oppose each other, or else go in the same direction

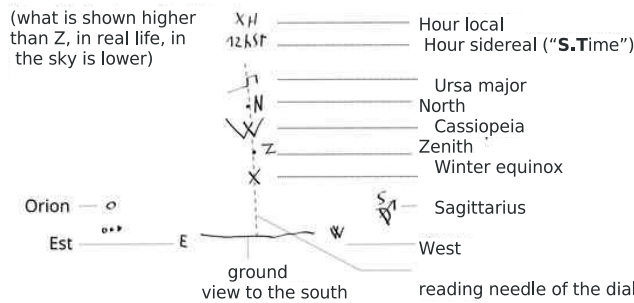

In other words, if, depending on the phenomena observed, winds, rain, sun, clouds etc., we can find at what time the quantity of e. is the greatest or the weakest, the most moving or inert, in order to ultimately determine in which direction the Galactic flow goes between Sagittarius and Orion

The sidereal day is ~4 minutes shorter than solar time. (The two hours again correspond to the winter equinox.) The sun, like the celestial bodies in its system, moves more slowly than the diurnal movement of the stars. Every year the same apparent position. In January the Sun is visible in the constellation Sagittarius. In July the Sun is visible in Orion.

Field of view

Representation of "Field"

Representation planetary

Representation galactic flow

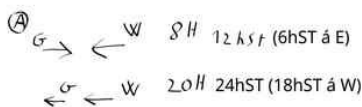

Local meridian; Longitude; ~1.44°E Latitude; +~40°

Hypothesis

The 23 May 2023

at 8 p.m. there will be a bulge that begins, attracts to the E + rain dense cloud

at 8 a.m. there will be a depression that begins, attracts to the W + clearing

at 12hST facing south, at the west, removing 6h (a quarter of 24h, it is 6hST. One can observe in the west the constellation of Sagittarius. in the East there is Orion rising. exactly opposite with respect to the celestial meridian of the winter equinox.

Observation (logs.).

23 May 2023

~19h30 small gusts E->W and W->E, birds twirl, twist N-E->S-W Raptor against dove following each other. Clear weather, gray cloud in the distance, slow gradient. Heavy weather a bit, light spirit, little pressure. Full gaze, calm, people outside.

20h-5 Current of the Earth returns after depression, empty, we see it
20h15 timid small gusts spaced of 2 minutes apart, medium clouds, large, cool well formed Humid without humidity, smells the sea, light happy mood rises, gusts, less spaced, of W
20h35 bulges clouds visible E, about ten stopped wind ~22h

Conclusion

Conclusion: it was the opposite i.e.

at 8 p.m. there will be a depression that begins, attracts to the W + clearing

at 8 a.m. there will be a bulge that begins, attracts to the E + rain dense cloud

Conclusion: the current goes from Orion to X

Conclusion with facts;

Orion passed overhead at 14h meridian face to current, it got very charged. Later, the same in the West. "Orion continues his run"

Then, from it we received the clouds and the rain, concentration in the distance in West brought by current of W->E of the earth that took over again. galactic concentration, bulge build-up with the e. of the earth

Observations (logs.) Following

24 May 2023 8h30 cloudy white, fresh, pigeon coo, pleasant awakening early
 ~14h Always white clouds, full cover, nebula, spark ++
 16h(8hST, Orion a little to the right of the meridian) Always cloudy flat white cover.
 17h ☉ Look at ...Orion to see if there is still cloud or that something comes from it, △ comes from it, steps slow, calm glance, says hello to ☉ from head from afar. ☐ next to
 ~17h40 small wind cloud well made from W coming, 2,3
 ~19h43 Thunders hears, a little clouds at distance *3 at W
 ~19h50 wind from W, SW 12h05ST ...O Galactic
 ~20h15 Orion falls asleep, Virgin runs, birth etc. rain almost rain without clouds because it is not very visible, big drops, spaced, torrent (Edge tube) "Have you seen the Virgin?" ☉ "yes"
 ~21h a little less, rain stopped. Then lightning far at W. 1,2, Thunder
 ~23h lightnings soundless

25 May 2023 ☉h ~01h ~02h silence visual, auditory.

28 May 2023 ~18h45, 11hST Wind e-->W, Orion at 2h to the right, (H in 12h)
 20h05 (12h20ST) (Constant local time - 7h36ST) thunder W far away 5-7 seconds
 No lightning, thunder, rain the precedent days since the 24 May 23, Orion sets since 25 min *2-3-4 Thunder
 20h30 air current from SW when looking at the meridian at 12h south and equator

03-8 June 2023 ~18h20 thunder afar *1
 ~19h10 many more other thunder afar W

17 June 2023 ~18h20 thunder
 20h20 it will be 12hST ...Orion with W aligned
 .8h20 it will be 24hST

errata

Sidereal time constant deduction

+2 -6h50ST ..+2, correction because UTC+2 =-8h50 (it is 5h05 = 20h15ST)
 thunders were triggered 2h early the exact alignment of Orion and current of Earth
 Place of observation almost on the meridian. Universal Time, 1.44° longitude but UTC+2 because summer time... hour of +30° E ...
 Exit from the bulge 2h later
 It was not at 19h,20h, it was at 21,22h.
 So gets heard before it happens.

4 different hours

the sidereal
 the real solar on the meridian
 the UTC+1 for the country
 the UTC+2 for summer retouch

headache ...

Thunder
 When the pressure on Earth bark
 Can fly to E.

≠ Alignment exact

Exit of pressure

The thunder began, ~7 days on ~10,10,
 at exactly the same hour, 20 min. loan (or 15)

In May, (month of the ancients)
 The Earth charge the morning ~7h30 (begins to charge)
 And discharge the evening ~19h30 (begin to discharge)

Tension Charge Discharge Relaxation.

- 23

Exp. in resonance

A bowl of steel on a loud-speaker connected to a radio "in resonance" has entered

remove the bowl, the effect ceases after three to four particles (abruptly (after this fairly long period of time))

(note; the power supply of the LoudSpeaker makes everything to stop. Connected directly on radio it works.)
(edit, same effect a day of great sun without ORAC)

Synthesis

A metal bell put on the Loud-Speaker and a radio. The antenna is next to it. If I keep it away, the effect stops. The Medium Radio is turning in the bell, "imprisoned" and repeated by the coil of the Loud-Speaker. (edit: one/several impulse/s of medium radio; "particle".)

1; It captures the particles well.

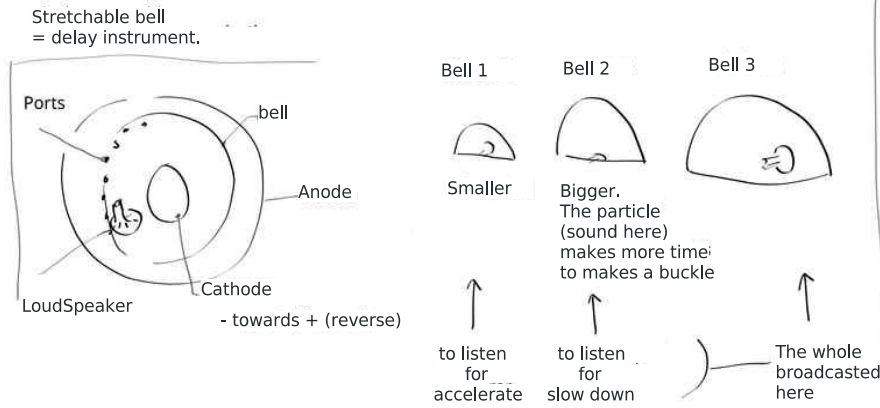

2; A buckle was created inside, took a while to draw, generate ∞ with coil. Heard with the membrane Loud-Speaker. The metal resonated. No motion.

3; Correspondence between the sound and the frequency in Hertz. What I listen to is the Hertz, what I give is sound. Putting in abyss, what runs under bell is the Hertz, and I listen it with sound. ex equo (the radio had no micro. so we can put in rotation the Hertz - a frequency.

= step 1 Saucer Studies.

(to listen, reproduce)
It remains to shift, to emit at the centre.

ID to make the shift e

LG

A plant, when it stops growing vertically, no longer being able to, evolves in growing horizontally, It makes the animal world

The stems, petiolarly merithals, the canals, the branches, the roots, etc. , become gigantic, their membrane becomes less than solid, so flexible, to be able to develop, that their skin is less visible, hard, refractory in light, than that of a green plant surface, than a bark. But it remains a bark, of energy as intense as possible, given the size, which covers the planet, perhaps. What we call animals, which move more or less, do it in it, in its cambium, or the various Medules, or with it. Fauna is a variety of flora, this rhizome, dragoenaen, contains it.

Hypothesis: It is happy, it seems, when an animal within it, with its eyes, its intellect, with difficulty, becomes aware of it.

The missing link was ants, hives, network mushrooms; At the same time an global individual and particular individual. The global functioning unitament, as well as the individual, extending, contracting.

So great that the flora itself that we will perceive is made by this fauna which is the real flora.

AE Tibesti - Tahiti

" Why are the 62°, the Galactic current effects would always be done at the same places on Earth? " Is it always inclined in the same way, still at the same places? AE djeleas says that no, that Earth moves in relation to him, but drawings from R. and research on frequencies and locations of cyclones, show that there is something that is fixed/permanent. Something that I did not understand. Now there is Tibesti - Tahiti, who show that they are opposed, Clearly

Hypothesis - Maybe the earth does not turn, in the end, in relation to this flow, that it rests on it, on Tahiti, that the flow G wears it, crosses it, like an anamole, a branch, crosses an organ, a corp, an orgonom.

Ameriques, a little right of the center of the anamole current which comes to Tahiti at 62°

AE Tibesti - Tahiti (and Shapes of the continents)

AE Tibesti - Tahiti letter essay

Dear,

I think that Demeo James is right in Saharasia, but also that Saharasia is the inverse of the flow that crosses the earth that R. described. In the form of an anamole, he comes to 62° with respect to the equator, he arrives towards the îles of New Guinea, his plan passes/arrives by India, approaches itself to the earth, wraps it, passing through all these islands, passes under Latin America, Ushaia ..., then goes back up, bay closing itself, by winding/wrapping (cyclones, form of continents) passing by Saharasia (which is the back of the buckles.) And ride up/back up at the end of racing/run, above Russia China Mongolia. The flow does not meet the Poles, there are some 28° below/above, the buckles are divided into two around its axis, like the rest of nature, leaves, rivers, feathers, orgonom, goes in an direction at a side, and the opposite direction at the other. A cyclone in northern hemisphere, in America, is between 90° and 120°W longitude (that is to say the most distant laterally from the Arrivale Axle (of the planet/globe/ball)). It has its opposite counterpart in the southern hemisphere, in the other direction. Not opposed with the equator as axis, like R. drew it, but in respect to the Galactics axis, that he discovered. (From this Anamole, this moving branch that holds the Earth. (Look at the bottom of the Latin America to show this meaning, and the Peruvian coast that runs along, inclined, from afar, the axis of the flow/stream, roll up/whirlwind/wraps with it, below, for example.) I owe this discovery to Demeo; in his book Saharasia, he described Tibesti(Tchad, Africa) as one of the most arid points and most at the center of the Sahara and Saharasia. I then looked for its opposite on the terrestrial globe with the longitude/latitude coordinates and came across Tahiti, almost exactly, as well as around Tahiti, in the same regions of the globe, the islands that he described (in continuation of R., Malinofky and others between), as the most "matrists in their culture, the most devoid of violence, with an abundant nature; Exact inverse in the Saharasia regions, described as patrists as much as possible in their culture and with an "nature" devoid to the maximum, without vegetation, without water. I then saw that the croissant/crescent of Saharasia ("Golden Crescent" in the court of history in Fr) was exactly the same as that forms the islands towards Tahiti, but inverted. We know since R. that the e. of Life, in large quantities, product water, vegetation, animals, wealth, happiness etc. And that without, it is the desert. I was looking for how the Earth met this flow/stream, as a result of the descriptions of R. It seems to me that its point of arrival (in large quantity on the Earth's surface) is between the Indian and Tahiti - Ushaia and that it crosses/go through the Earth, at the same time by the interior of it, (the volcanoes which form themselves there are its expressions, interrelations, like plant shoots which spring up and absorb) and at the same time by the sides, the edges of the "ball" (ball; analogy of R.) making visible meteorological phenomenon.

- If there is real inside this;
- I do not understand how/why the Earth turns anyway on the equator.
- Why this plan is more or less fixed compared to the Earth.
- And there would be a front of the earth, as well as a rear (which is almost near the Meridian of Greenwich)
- Perhaps it would be necessary to shift the equator and simply put it to 62°.
- And Himalaya would be like an arrival ramp, and the Indian continent would be as a arrow indicating the direction (of the galactic flow on the earth.) (like a traffic panel)

Cordially
..

AE Tibesti - Tahiti On a planisphere, the G. flow/stream can be shown as a sinusoide passing through Tibesti and Tahiti, crossing the equator at 62° and whose the summit, which does not go higher nor lower than 62° latitude North and Sud, is between 0° and 30°E longitude in the northern hemisphere, and 150° 180°W for the southern hemisphere. The main cyclones will be made between 90° and 120° longitude East and West.

Je pensais au sens de circulation dans la colone, après avoir imaginé et vu qu'y avait 23 ou 24 croisement chez Homo Sapiens. pres de la fenetre, apart "rouge" Je pensais à Aurore et cherchais les directions, en observant. Quelques jours plus tôt, en rentrant un soir de biblio science, j'imaginai, comme ça, être derriere une écorce, tout comme ce que je venais de lire des systemes descendants des radicules des arbres, l'image me plaisait, du cambium gelatineux un peu mobile mais pas trop, avec l'écorce, ça allait bien avec mes rencontres de jadis, mon évolution, niveau temporalité, type de rencontres, semblables à différents niveaux, peut être.

Je repensais, tres vite fait à cette phrase de R. ~p127 sur. cosm qu'illes ne savaient pas pourquoi on est 2 sexes différents, pensais aux seins d'#, tous les sens, essayais, voulais les avoir, les attirer. Pensais à # après, puis # juste après avoir decouverts

Ce fut ma confirmation, ça semblait bien comme ça

Puis je mettais ça en relation avec

Ah, quelques jours plus tot, à la biblio Bep, ai vu que plasm était exactement comme Nebuleuses, et sexualité contenait les astres, astre chez fille, une à coté, à la volée je compris que c'était dans son dos que ça se passait, et il y eut un mouvement general tout autour, elle me regardait serieusement. Ça, c'est ce qui m'a poussé à écrire, partager. C'était bien trop grand comme savoir. Savoir gaché par la peste à mon égard (alors je fis les premiers dessins, par dépit) C'était mon travail de mise en redac de tout ce que je savais plus de l'observation, à grands coup de combats perpetuels pour pas être distrait. Je dormis longtemps dans le couloir, par terre, absolument seul, sous le grognement de haine d'un voisin du dessus

Ultrapresent qui cassait chaque inspiration, Une vraie plaie de chaque instant, impossible à définir mieux.

Il y eut une conférence d'été, en ligne de WR Museum, quelques jours avant je visionnais une archive de conf et observais Mouvements des mains des intervenantes sur la sexualité. Une intervenante fit un mouvement vers l'avant, très marqué, à la fin, elle était en état de choc apres la decouverte de l'e. Renata Moise Reich l'a rassurée alors, puis montré du bout des doigts les rencontres. Auparavant j'observais ses mains qui suivaient ses pensées, elle avait une façon délicate, répété Pour la deuxième fois, de les dérouler vers l'avant et me demandais quel était leur sens, direction, si ça aurait un sens. .

Le lendemain ou 2 jours plus tard, à la biblio, je regardais, tres vite fait, en passant, l'image d'un dessin d'uterus, pleine confirmation ce fut. Ce fut, completement inattendu, les 2 trompes, le sens.

de la, je révisais encore le sens des hommes (le soir ou lendemain et suivants jours) c'était bien ça.

C'est quand, n'en étant plus à mes premières surprises générale, je décidais de tester cette théorie de l'écorce, en cherchant à réactiver mon flux, mon désir, ma sexualité, avec un fantasme de cette invnsion et de pas lâcher cette théorie que je vis que ça bougeait, Puis, completement, l'anamole qui vint, c'était confirmation.

ette anamole, je l'ai noté, dessinée, consciencieux puis retestais les jours suivants.

Ah, je me demandais aussi, ce que le plasma attendais de moi et comment ne plus avoir, un peu mal, etre bloqué en bas devant. Systeme desendant/montant, la théorie marchait. L'imagination était réelle Mais pleine de lois que je ne connaissais pas. Je la travaillais.

Je cherchais aussi à découvrir comment j'avais pu attirer # de façon attendue/inattendue (ce fut le début de pas mal de choses) par ou, comment, (pourquoi?) bien longtemps avant, deux ou trois ans plus tot bien qu'elle m'eut traité de "tricheur" et toute cette triste, dure histoire.

Puis à la conf WRM, payé plus de 100 euro, je l'ai regardé, cette année par dépit... après les nébuleuses, c'était mon état d'esprit, il y eut un intervenant qui fit un mouvement de la main, lui aussi, je regardais le sens direction, c'était le bon, celui que j'avais noté. Pour homme. Tom

Diferminando, je lui envoyais les dessins en demandant si j'avais raison sur ça. Il répondit que deux fois, une fois pour savoir ce que je voulais, si on se connaissait, une autre enjouée et vague continuait les questions, avec des promesses de réponses, puis plus rien. Sachant notre probleme, je lui envoyais la suite des dessins, dans le silence éternel.

Il y eut aussi une photo de deux squelettes, dans Saharasia de Demeo, un homme et une femme, qui m'émeut fort pour leur position et la beauté de la chose, des asiatiques, proches l'un de l'autre, elle, de profil, légèrement courbée vers lui, belle, et ses cotes que je regardais. Lui de face, la tete vers elle, un peu penchée. Assassinsés mais illes s'aimaient, c'est sur.

Mais c'est surtout cette hypothese et dessins de soucoupe volante, ce décalage, pour naviguer, qui m'inspira et me fit rechercher dans cette voie là, en quete du vrai dans le fou et la science fiction et l'art et l'envie de naviguer et le besoin de bouger et l'observation, 1er dessin de cette série apres le résumé MDC

y a eut aussi les pigeons, que plus je regardais, plus je respectais, les seuls êtres vivant assez gros que je puisse voir en ce temps là. ce décalage entre la tête et le reste du corp fut inspirant - et débloquent.

Il y'avait aussi, que globalement, ça allait pas avec les femmes. Très peu semblaient l'avoir lu (quel soulagement de voir qu'il y en avait!)

Il y avait Colline, quand on en a discuté, une fois à propos de ça, elle insistait pour dire que c'est dans l'autre sens, que ça remontait vers sa tete

(puis il y eut la peste qui entra soudainement en gueulant p...dant (chantant, se pavanant) par peur etc, coupant net les 3 mots échangés, sans surprise); y avait un truc qui allait peu être pas finalement dans ce mouvement qui descend; eut être différent chez l'homme et chez la femme me demandais-je. timidement, bien que je savais qu'elle était grandement bloquée en bas, historique inquiète, et donc peu fiable sur ces trois mots. on pouvait les interpréter comme un simple rebond, ou l'envie de felation ou je ne sais quoi de bucal, et c'est tout. Mais je gardais un droit petit. très petit, c'était la première à me parler d'e. je crois, à décrire ce qu'elle ressentais, d'agreable lors d'une felation. Ca m'avait étoné mais j'avais gardé le doute là aussi, et elle avait raison. redevable donc. Il y eut le film "George qui?" qui commençait par décrire la "seule différence entre un

squelete d'homme et de femme est les os du bassin plus grands chez femme" et s'arrêtait là en marquant la phrase. dit par une femme. Il y eut le livre sur les squelettes de la biblio p8 que j'ai consulté plusieurs fois. Rien que des photos, d'especes différentes - grand livre que je laissais sur la

table en partant - comme 8 ans plus tot pour m'aider avec des images naturelles quand je fais de la philo difficile... ou je vis que les os étaient différents entre l'homme et les autres especes, et en quoi. Choqué de la brisure dans la colone vertebrale. Me demandant quel était le mouvement dans ce bassin alors ainsi

il y eu la phrase "befalen a whole specie" de R, qui m'a enervé aussi en plus des autres Whole gen. of vipers and vermines etc

Il y eu la these d'# biensur qui mentionnait des mouvements derriere devant, sur les cotés, étrange ce fut mais j'ai décidé d'y croire et de chercher.

Il y avait que c'était la seule chose que je savais faire, pouvait faire au final, dessiner, je l'avais déjà fait pour #

et puis tout le reste, les mots qu'on se dit pour s'encourager "Tahumazien" découverte, merveille etc. les mots en latin a des moments clé qui m'ont sauvés. La volonté acharnée de m'isoler et de me détruire des anciens ami-es

Il y eut Aliche, qui me confirma que oui, elles ne savaient vraiment rien de rien. Il y eu toutes les expériences autres.

Le mot "Developpement"

il y eut ce silence qui devenait douteux et ce dist d'expérience que l'a ou il y a silence et évidences, c'est à questionner

Le tout fut une confirmation nette, que ça fait 50 000 ans qu'on se croise et se parle entre homme et femme, sans jamais se parler.

Puis il y eut cette phrase de la Genese "la femme née d'une côte d'Adam" qui montre bien ce mouvement vers point de rencontre.

il y eut cette phrase de Melo-Maria qui galerait visiblement "je la met ou?" parlant de l'e. dans son dos.

Il y eut que je galerais moi-même depuis des années maintenant pour savoir que faire de mon excès d'e. quand j'en ai, qui fut pressé par l'

apparition de mes metastases que j'ai ensuite tout fais pour stoper leur developpement, tant à comprendre. C'était vital absolument. Tant j'ai pas eu de chance a ce niveau (+ a la machoire qui s'est a...er ... mouvement a comprendre en plus, c'était long pour la moindre évidence) vital aussi) ça m'a enervé - aussi! Il yeut pas mal de marche , de test en pleine rue et chemins. Non stop a vrai dire

Il y eut les "2 secrets that I emport in my tomb" que R. écrivit et les éléphants bien sur (point de départ de folie) Il y eu tes encouragement

extraterrestres quasi direct que Renata Moise R. décrivit ou un vaisseau Ilá approchée, encouragement a la decence etc. et a connaitre et y eut les vers de Villon, Rimbaut, Ferré Sur les fesses. Mais surtout Villon "Ma tête saura que mon cul poise"

Il y eut des milliers d'inconnus qui m'ont laissé vivre jusqu'à là. Il y eut les eureka du dessin sur lune ou autre astre avec # ~Mon visage est fait du sien, de son regard"

Il y eut la certitude qu'on est fragile, qu'on a pas de mémoire, qu'on est si vite distrait, que tous et toutes s'entrepayen à nous détruire, détruire mémoire, intelligence, Savoir, amour, etc. Réalité plasma vision entente. Ça m'a enervé.

il y eu l'envie de sortir. Il y eut # qui n'est pas venue, Malgré toutes mes croyances et découvertes et changements. Ça m'a déçu, enervé. Il y eu Dante qui a dit "e qui a l'habita, e man che trema" que je posais en, c'est le plasm, la vie elle meme qui agit ainsi, elle tremble, est timide, apprendre soin. Juste avant l'anamol.

Il y eu mill ans de tourner en rond, rester seul, compulsivement et de sublimation, expres, pour laisser place, peut-être a euristique.

Maniaque devenu, Non gratifié

Il y eut #@ qui m'a envoyé deux trois texto de temps à autre. Puis plus. ai du batailler tant de fois pour la chercher, puis ne l'ai plus cherché.

Il y eu ces carnets. Rhodia, souples, dotté

Il y eu un mouvement crescendo de confiance en moi dans les découvertes. et les confirmations de peste : et de R, le reste.

il y eut le souvenir retrouvé de l'amphi avec # et les autres.

Quand je l'ai redessiné, passé du carnet au numérique, je me suis demandé "vraiment si simple?". autant que ça? tellement qu'on a rien vu. et aussi si R, et les autres autour de lui l'avaient caché volontairement, et si c'était éthique éthique, de le montrer si y avait des Conséquences de viols ou autres profits.

Je pense que la terre en a besoin de ce flux.
Oui c'est bien d'une flamme qu'il s'agit, dirigée vers en dessous, vers proche-orient etc. Mais rayonnant autour.
quelque part, ce flux, cette partie, ce dispheriloide là, est resté accrochée à la terre. Je crois que le Mieux est de la décrocher pour qu'elle continue
Son chemin dans l'axe galactique de ces anamoles.
Vers NE donc. Si j'en crois mon coeur, mes épaules, mon thorax, ce décrochage sera vécu comme un
arrachage difficile de dessous la terre à cet endroit avec quoi c'est superposé.
Mais ça libère la place à un flux plus jeune, riche, frais.
Je ne sais pas si ça change l'orbite de la terre.
Pour l'arracher (le remettre en mouvement) peut-être créer un point de concentration au dessus pour l'
attirer - weaker to stronger, dif. potentiel etc.
Sinon je vois pas comment éteindre vive flamme si grande qui brûle inaperçue depuis des milliers d'années.
Jeter de l'eau dessus ? de où?

Foot = Zone of exchange

1 flow To exterior
From above , the fingers/toes

1 flow To interior
by the sole/base of the foot

Cores 1 and 2 in opposite direction

the 1st comes out of the pelvis, goes to the knee articulation, bone front of the leg,
Then bump at the bottom (not the heel; ankle)
Then bones fingers of the feet/toes.

The 2nd, by the sole/base (reverse core/dispheriloid compared with the rest of the body)
Then heel, then ascend backbone bottom of the leg
Then surround knee articulation = kneecap,
Then returns Pelvis, by articulation (without bone but tendons under the thigh)

AE Anamole Earth Following
Europe

Europe
Core 2, Wing 2

Europe : Very distorted,
The Wing is pushed while developing ;
By flow of Core 0 which impede it at the E. ;
By Wing 2 of Core 1 which push it from the N. , on the top;
By top of Core 3 Wing 2, which rushes to him at the E. from below.

The Alps are edge exterior. of the bottom of its Wing.
Structures of Core 0, the old ones, shift to the left, pushed by by Core 3, Wing 2, and pass under Ext. Edge. from the bottom (from Core 2 Wing 2)

Ext. Edge of the top, by pushing towards the right to develop, impede Flow of Core 0 to circulate easily above Tian Shan (Core 0 Hole, Sup. Exit).

Flow Ancient structures between Core 0 and Core 1 (in the same place) shift to the right , Mountains.

Everything is very contracted.

Between Core 3 Wing 2 and Core 2 Wing 2, it is the same than Meso-America.

Interior Big Whirl = Germany (Talheim , town). Very great strength, expansion power. Every ~ 50 years , comes to bang towards the W. , towards France, then returns to E. and S. ; oscillation = the largest groundwater table in Europe but also invasions by Swastika etc. The eye that cries the most of the planet. Verdun - where I was born; Phalsbourg

AE anamole Earth Following Meso - America

inclination .

Histoire Core fruits "paons" h&f(s)

Pour le Core dispheriloide ,

il y a eu la graine de Tilleul de l'arbre à coté de la fenêtre. y en a eu une qui est venue sur le rebord, Puis plusieurs. Au bout de quelques jours j'en ai mise une à coté de l'autre, puis au bout d'un moment, me forçant, mises symétriquement, tel que sur l'arbre. Je dis en me forçant, parce que c'était stupide ce genre de "Jeu" d'ennui, et inutile etc. Puis quelques jours plus tard, toujours cet automne, un matin, je me suis autorisé 5 minutes dans le petit Jardin ou y a l'arbre entre les bâtiments, regardant le ciel au loin, ce qu'il restait d'étoiles, Mais rien vu, je repensais un peu à l'anamole de la Terre, me demandant si c'était possible. Puis, déçu de ne rien voir, juste avant de rentrer, Tandis que je marchais, Pressé pour pas être vu là le matin, Seul, oisif au milieu des travailleurs etc., je me suis autorisé, difficilement, de faire deux Pas en arrière pour compter les graines sur l'arbre et observer leur disposition, une moyenne de 7... Je dis difficilement, parce que c'était stupide cette sorte de Jeu inutile, Tandis que sûrement sans doute, l'au-delà est plus important à se soucier; le ciel, plutôt que ce qu'était juste là, l'arbre, bête et immobile, ne parlant pas, etc. Entre les deux épisodes, en ville par hasard je vs ces graines Par terre devant un magasin à l'allée des orgueilleux, je m'autorisais difficilement à regarder en l'air et m'arrêter 2 secondes et demi au milieu de la foule pour regarder si elles étaient sur l'arbre dirigées vers le bas ou vers le haut. C'était le bas, je ne le savais pas. Je dis difficilement, parce que à cette heure et dans une ville, il fallait rentrer vite et regarder droit devant soi; sinon on est accosté, questionné, dévisagé... J'ai réussi à voir et rentrais en bus, seul.

Il y a eut la mandarine ... Récupérée dans une des Poubelles du bâtiment, au milieu de la nuit j'avais faim, à la lumière de la bougie, je regardais difficilement la forme d'un quartier et difficilement déduisais le haut du bas après l'avoir retiré de la peau et détaché des autres, il restait deux quartiers; j'avais tout mangé, mon seul fruit en peut-être 6 mois ... difficilement alors je les remettais dans leur peau Pour déduire le haut du bas, pas évident d'abord. une fois Trouvé, difficilement, je les plaçais symétriquement, et, au bout de longues minutes d'observation ainsi, seul dans une nuit, des petits bouts logiques de leur formes m'apparaissaient, je les mettais en relation avec ce que j'avais dessiné en final du système opposé des 2 sexes. Et là, Magie; Ca correspondait.

C'était fou, pas sur, et complètement inattendu. Je regardais encore, et plus les heures passaient, et Plus j'avais de question, par exemple; pourquoi la graine précisément à cet endroit et pas ailleurs, Sans réponse, peut-on voir les traces des tourbillons dans les tissus blancs qui font le dessus du quartier le coté entre les bules gorgées de jus entre les quartiers

Tout la découverte du disphéridoïde s'est fait là, ça correspondait entièrement au dessin dont je viens de parler, (le paon h(s) et son inverse devant) simplement en prolongeant les flux sexuels) les tiges blanche au Milieu, comme arrivée du flux était parlant et je vis alors que j'avais eu raison pour l'arrivée par le bas du fruit, le tout petit opercule de dessous, presque invisible, que, j'avais imaginé quelques jours plus tôt devant une friterie où il y avait un pot de fleur et un tout petit jardin avec un arbre avec des sortes de groseilles rouge, en même automne. Ca m'avait stimulé et restimulé. Je l'avais noté difficilement. Je dis difficilement, (et même Très difficilement, Parce que c'était stupide (et même très stupide) de noter cette sorte de chose inutile et bête et folle ... Tout remettre en question bas voyons, découvrir un principe de base présent partout depuis toujours, et jamais compris Complètement inutile (et même très complètement inutile) et puis pourquoi, et pour le dire à qui Je suis seul ... (et même très seul)

Bref je connectais le fruit rouge de la friterie, avec la mandarine nocturne, avec le dessin des prolongements sexuels des paons h&f(s) de face, (que j'avais fait quelques jours plus tôt) avec le final de l'étude des pétioles (où je postulais l'arrivée dans le fruit par l'arrière, ainsi que le rebond sur la tige du fruit et l'espacement qui grossit etc Plasma, et que c'était parce que ça peut plus rentrer dans la plante) Ainsi qu'avec les graines de Tilleul, tout correspondait.

Puis plus tard, je connectais ça avec l'anamole Core crane, il y eu un bref flash sur de longues minutes à regarder une photo de crane dans Saharasia, après avoir difficilement Numéroté les pages ou y avait des photos de cranes. Tout à coup c'était évident, mais y a eu long parcours avant. Je dis difficilement, parce que c'était stupide de numéroté des pages en liste alors que l'auteur ne l'a pas fait, surtout pour des parties de corps humains, cette sorte de jeu inutile ... pourquoi pour qui

et puis c'était fou, ça correspondait pas avec ce qu'on voit en Premier, la dentition, la machoire, la grosseur du bas et le lisse et dur du crane de dessus en une sphere parfaite ...

Stupide de penser qu'elle était pas parfaite et que l'ensemble du crane, de la tête avait une logique, stupide de chercher, stupide et ... étonnant de le découvrir, comme ça, dans l'ensemble, d'un coup, complètement inattendu, C'était après la dispheriloide mandarine et Tilleul, quelques jours. Mais vers le milieu d'année j'avais avancé dans cette recherche,

Soudainement, un matin en pleine nuit, au reveil, quand je vis juste cette simple boucle avec une arrivée droite, et que difficilement je notais et prolongeais la sortie vers le bas en faisant une autre boucle qui pourrait, soyons fou, correspondre au mouvement dans la machoire, et la grande boucle à celui du crane et l'entrée, à la bouche, au flux qui vient, et stupidement dessinait ainsi un crane par absorption du flux du plasma.

Il y avait aussi mes dents biensur, Malgré ces presque trois ans de Recherche de compréhension à mon tic de machoire du bas et de guérison des vieilles caries etc. plus toutes les années avant et tous les accidents, dont surtout les abces et les douleurs ... Rahlala, il y eut tellement avec ces dents.

Tellement plus que trois lignes ici. Jamais rien de positif, sauf Peut-être quand j'ai vu que je pouvais garder une molaire grandement abimée et m'en faire un totem de combat contre la société (qui voulait me l'arracher et en faire un totem de mon echec final, de ma mort)

Histoire Tarim Tian Shan

Puis y a eu le Tarim bassin, alors là c'était l'halu Complete de voir que je venais de découvrir la preuve qu'y a bien un flux dans Cette direction qui passe sur la terre, et a la fois des les cores dispheriloïdes géants existent et que savoir cette forme était un prérequis pour voir ce flux. l'halucination complete. Une euristiche absolue depuis le début ... M'a fallu un certain Temps pour considérer la chose, ai bien regardé Toutes les photos satellite que je trouvais en bibliotheque (pas sur ordinateur ! ça casse les yeux !) Ca correspondait et avec toutes l'histoire géo détaillée dans Saharasia.

L'halu complete ... absolue ... après quelques jours, soyons fou, j'en cherchais d'autres des cores, dessous, dessus ... Je voyais pas, juste des petits, de profils de ci de là, des peut-être.

Puis je doublai l'halu avec le Core Amerique du sud et Afrique ...

Tout simplement ... Alors là ... Je ne pensais plus je crois ... cherchais encore et trouvais Rien de moins que l'arctique; sa forme était bien celle d'une aile de Core, jamais je m'en serais douté.

Je vérifiais, placant groenland et Islande, tout correspondais.

Si dessus c'était ça, j'allais Regarder dessous; longeais les dorsale ... et au bout de plusieurs jours je découvri le core Antartique avec Australie - incroyable - une photo satellite confirma le mouvement Parfait des Nuages Tout le long de l'ailette Australie. Cette photo était faite pour montrer une succession de 4 ou 5 cyclones au dessus de l'Amerique ... n'y trouvant Pas de logique, je regardais en bas de l'image, difficilement, avant de refermer le livre et de partir, seul. Je dis difficilement, parce que c'est stupide, cette sorte de jeu inutile, de s'empêcher de fermer un livre alors qu'on est entrain de le fermer et de descendre les yeux de ce qui est manifeste et fixer le nul-part, l'inintéressant du pole sud, y avait pas une seule photo ou on pouvait voir l'Antartique et l'Australie côte à côte, enfin, sur le même Plan. Je déduisais difficilement qu'y avait intérêt à trouver.

Je dis difficilement parce que c'est stupide cette sorte de jeu inutile de penser que toutes les photos satellites sont choisies, Rognées, trafiquées (enlevant systematiquement l'enveloppe bleu de la terre, du plasma en l'attenuant très fortement ou remplaçant tout bonnement par du noir complet Manifestement Rajouté par un détournement à Photoshop, et stupide de penser qu'elles voulaient Pas que ce soit visible Nul part, et volontaire de Ne jamais montrer la terre Vue d'en dessous ... (Comme le reste Hein ! Jamais montrer le dessous des corps ... Tss ...)

Puis cherchais le lien entre Tarim et arctique, et difficilement le trouvais au bout de quelques jours. Je dis difficilement parce que c'était stupide cette sorte de jeu inutile de fixer des photo au milieu de gens qui nous méprisent ou nous prennent pour un débile ou un monstre et de penser qu'un flux peut se recourber à cet endroit et que les photos sont tellement mal Cadrées

et toutes les cartes et tous les planispheres Tellement déformés que la moindre continuation était absolument impossible à voir. l'a fallu venir par le haut; dorsale de Gokkel, presque ille, Verkhhoiansk, et un grand effort d'imagination Tellement le lien est effacé des représentations, et les montagnes là-bas présentées comme inintéressantes. Toute une zone oubliée ... Déjà, le Tarim Tian Shan, je connaissais même pas, mais alors là ...

Puis je connectais tous ces Cores ensemble, me disant que c'était assez. (en 2 em étape Surtout Connecter ~ Australie / antartique avec Tarim) Je fis un dernier effort Surhumain pour Numériser ces 3 ou 4 dessins en 2 ou 3 fois, flipant pour Ma vie au plus haut point, l'envoyant par mail, brut à A(s), ultime effort de les inclure à la suite des autres images. J'étais en folie complete enfin hebetude ... Halucination ...

Je connectais alors l'anamole totale à la desertification et compris l'altitude du flux, de celui-là et le connectais avec le dessin de la flamme, Flox flogos. Je Retournaient en bibliotheque et Regardais difficilement les deserts d'Afrique de Nord et de turquie et imaginais apres un long moment les formes Possible et les marques au sol visible et vi l'opposition de tourbillons Un peu décalés. Ca correspondais. Je di difficilement ...

Ce fut mon anniversaire et je mis sur internet. Au moment où j'écris ça, il s'est passé un mois et ~10 jours depuis mon anniversaire. ou je ne fis Rien, Ne lu pResque plus, ne Sortie pas, Rien. OS. Il y eu des bonnes années que j'envoyais, 3 ou 4 qui eurent des Réponses - Mais rien de COHÉRENTS.

Il y eu le moment où je vis le Core de mon penis. Un jour Ce fut le gland, difficilement Nu antre ce fut avec les testicules, difficilement

Il y eut le jour où je vis les cores dans mes doigts, dans ma paume, mon avant bras droit, mes jambes, cuisse ... en fin, tout difficilement. Tout était stupide et jeu inutile, Compètement. l'halucination et le pressentiment Complètement confirmé que j'avais découverts la forme absolue partout présente, en tant que fonction, de la suite des superposition, du plasma, Me poussa à noter Jackpot ... et je connectais ça à l'arbre de vie et surtout à A(s) et lui envoyais un Mail où je disais alors que j'étais allé au bout du "délire d'un type" en lui disant une ligne avant que Vos doigts, phalanges, paume, avant-bras et la tian Shan montaigne, c'est idéM.

C'était entre l'épisode Tarim et la découverte des autres Core de la planète.

LS epilogue log

Ruka 01 /02/2024 vers Minuit ? C'est là que l'ai partagé à 3

- 1, avec legende et autres txt, " C1, A2, BE" et "ce qu'il reste de tempéré à notre planete" ~ Pas de Reponse
- 2, Sans Rien d'autre mais visible sur whatapp Sans avoir a cliquer dessus . 3 jours plus tard , n'a pas ouvert la fenetre de conversation . pas de Réponse
- 3, Sans rien mais après dernier drawing . done Reponse à la volée , headshot FPS, " Top ! " suivi de 6 Mots , puis plus Rien . " je n'en ai encore jamais vu "

Epilogue facon de penser

Les Sentiments , Sexuels , te donnent des indications Sur l'endroit de ton corp ou tu as des ancrages . En ayant associé un souvenir d'une personne , d'une Rencontre (Rarement sexuel en acte , plutot des frustrations diverses et varées , par parole , bruit , Sensation d'une situation avec un flux quelque part , qui l'arreta . A toi de remonter à la Source , essayer de se souvenir de quelque-chose , (pour ça faut avoir bien mangé , bien dormi , être seul souvent) , oser Se souvenir une fois appercu . Puis y reconnaître la sexualité quelque part , d'une manière ou d'une autre , tu verra (si tu penses comme moi) une partie du Corp de la persone du souvenir . Tu l'aura vu en Regardant ton corp . Puis Essaye d'assumer que cette partie chez l'autre , (identification) c'est la tienne . Oui , celle que tu regarde ou essaye de sentir .

Là , tu verra que quelque-chose Se met à bouger , plus , Naturellement , tu questionnera cette partie ou l'assumera . ça fera de petites Saccades surement , ou bien une grande douceur , si tu as enlevé Pas mal d'autres ancrages . Pour tout ça , faut Manipuler ses idées , et pour manipuler ses idées , faut avoir écrits , essayé , s'efforcer , beaucoup , les agencer , les disposer .

Pour ça , faut avoir lu , beaucoup dans mon cas , Pour savoir que c'est possible . l'etymologie des mots t'aidera beaucoup , infiniment dans mon cas . On aura fonctionné avec des Mots entre humains . chaque ancrage se traduit en Mot à ton esprit . Et a grande échelle , les Religions maitrisent les Réseaux par les Mots qui sont ancrés .

Tu cherchera des signes , va , ça ne Sert à rien , ils t'excederons si ils apparaissent . Puis faudra les dépasser pour oser vivre et t'affirmer .

Tout ça est infini , parfois il est bon de Rester petit .

Rien n'est plus haït que ceux qui font ça . Personne n'est Plus trahi , car lecture et ecriture mènent à la connaissance , celle-ci , au pouvoir , qui est réellement superiorité sur ceux qui n'ont pas lu et n'écrivent pas qui se sentent faibles et vulnérables , qu'elles ne valent Rien . Illes ne Vallent vraiment Rien . Et tu cherchera un Moyen de faire chuter ton orgueil car tu es combattant.e pour des causes justes , à la base , et ces idées son inverses .

Ecrire laisse circuler le flux à l'interieur sans y penses C'est un systeme d'autofelicitation , qui Resout les castrations genitales Sans que t'ai besoin de t'embeter a penser du genital . Bref , tu es faux.sse , (et hypocrite) et orgueilleux en acte Souvent en fait , Sans l'admettre . tu vois qu'y a pas Raison de se Revolter contre la différence de culture et de pouvoir qui t'es imposé . En fait , ça fonctionne juste comme ça c'est injuste mais Non . Tu es arrivé a la lecture et ecriture par Solitude et Hasard car illes t'avaient déjà trahi et Retrahi , laissé pour mort.e . Cette connaissance là te rendra Stoique ... Zen ... enervé pour toujours , en vain . Tu Cherchera partout des ami.e.s capables de faire la même chose , lire , écrire ayant connu la solitude . Mais ce sont justement les gens qui ont été et sont encore empêchés de lire , d'écrire , de Penser , de s'ennerver , d'être seul (par les religions) que tu sollicitera . Précisément elles et eux . Ton seul confort sera de savoir qu'illes le désirent ainsi . y a qu'à prendre l'exemple de la technologie , artefact de destruction par exelence , qu'illes défendront de toutes leur force et Relations .

Tu verra les cercles Vicieux partout , comme on verrait des Eléphants roses ; Les Elephants sont roses ... , les Cercles sont Vicieux .

Et le temp deviendra ton ami.e , Plutot , tu te battra pour être le sien .

“ Concipio non dividam [...] protinus amor oritur ”

A CS candle
Exit Sup Quick blown forward

A Core EG.
Candle wick Following

~ 02.29.24 ~ 10:30 a lot of balls , Look like a tree . On 3 candles . A whole tree in the Flame . there
was no this in the early morning . Wet rained yesterday or in the night . ☹ close the
window , the balls disappear by 2 candles and are reduced on the 1st

edit after ; mushroom tree around the trunk , As in the forest , the mushrooms around the trees when
wet . a little spiraled, “Rise ” directed individually upwards . countless , of all sizes up to ~ 1/5th of the
Flame width .

edit next day ; The balls are hollow it seem fragile . ~ same hour ; 1 wick out of 3 with ~ 6-7 balls ,
☹ pushed them with finger quickly)

LG Skull Core 2

(edit after ; Seen at the " Mona Lisa " (FR. " Joconde "))

LG Skull Core 4

- A = Exit Sup. Skull C1
- B = Exterior
Superimpose itself
- Core Hole = space above the lips
~ mouth bazoo/muzzle/maw/entrance.
- BW = Upper lip
Mouth bazoo,
the 2 swelling in the middle (protrusion)
- EE = from the nostril, center, to the Big Whirls (Upper lip)

edit after ; Seen at the " Mona Lisa " (FR. " Joconde ")
Part of the "smile of the Mona Lisa"

LG Skull Core 1

edit ES = Mucus from the nose , nose
"runny nose"
(which is behind, made by A.B)

LG Core Ribs

edit error)
⊖ Validates the 2 directions It makes the ribs and vertebrae
whose cores are in the opposite direction to the Core Skull and Core Pelvis

Everything else remains valid
Just the Ribs and the entire Torso, trunk, vertebrae
(large part of the body visible) is in opposite direction.
(edit 2 days later ; and same direction for ♀ and ♂)
Which explains
- that there was no link
between pelvis and vertebral column ,
- that the ribs do not come from the vertebrae ,
they are attached to it by fusion of the External Edge
of the Big Whirl , which rushes on vertebra .
they come from the front of the body (bottom in
Almost all other species .)
- that vertebrae are not inverted for ♀ and ♂
because ingestion is the same .
Almost everything else is reversed .

Internal organs
heart, liver, are ((B , F , EE) . (B , BW) , (" eye "))

LG Crane Core 5
Jaw

LG Core Skull

General	---	1	
Jaws	---	5	
Ears	---		
Nostrils	---	3	--- (1st have been see)
Tooths	---		
Lip upper	---	4	
Eyebrows arcade eye	---	2	

LG Core chest Following

the node of the chest Core (♀ : udder , breast , Nipples ♂ : pectorals, nipples) ,
is the genital parts (node , base of flame , point of concentration
glans for ♂ Exit from clitoris ♀ ES).
Its EE , under the BW , go through all the body .
Its BW surrounds the shoulders . (Big Whirls)
Its 2 Wings are the same as Core pelvis .

A buffalo also has enormous the front of the Torso (But without nipple) and its pelvis is directed to the up front .
it seems to ♂ . This would be an explanation for the ever thinner , often smaller , front legs in all quadrupeds ; less
of e . , given the distance , at the Exit of Big Whirls of these large Wings . and that would explain why
Udder Breasts ♀ and pectorals ♂ , are always in the same direction as pelvis . as well as all the
front of the body .

(edit after ; Seen at Trobriand ♂Belly : flame Nucleus (and separation of the ribs (BW , EE)
makes the flame N) ,
Torso " in V " for ♂BW Sup. with F in the back and BW ES = udder Breasts .
F in front .
BW , ES , impossible because towards the Source of A = + strong

(A,EE).(W1,BW)|(A,EE).(W2,BW)
AO,F,EE,W2,EI and flame N

(edit next day

♂ BW back ext. to front int.

♀ BW front ext. to back int.

♀ (BW , EE) = (N , EE)

♂ (BW , EI) = (N , EE)

♀ Nipples (BW , ES) upwards

♂ Nipples (BW , ES) downwards

LG Core Chest Solar Plexus :

A comes from above
B comes from the exterior.

Solar Plexus

the EEs of B are ready to
Sup themselves with BW EI
the belly is the flame , Nucleus .
it is off . To power it :
unblock the diaphragm , Solar plexus
by making an intendere , i.e. , by
pulling on the base of the flattened core
of the Sup. (A . B) , moving forward
the inside of his F . , until the
end of N , the flame , flogos , of (A . B) , until
bathe the node , the Wick with .

It is done with some " hope " at the
Solar Plexus Zone.

donc le signe masculin ♂↗ est mieux comme ça ↘ fleche vers le bas
 ou celui feminin ♀↘ est mieux comme ça ↗ fleche vers le haut .

GB exp ~17.03.24 (au hasard)

(Z) -- graine d'olive X1 ~0.5 cm ∅

dans petit pot , eau ~ 4 cm , posé sur Radiateur allumé . eau etait mélangée avec Orite ou calcaire du fond d'une casserole qui a accumulé taches blanches pendant plusieurs mois a faire bouillir de l'eau " du robinet " de la residence Toulouse . Blanc residus déposés au fond entre ~0,4 et 1cm.

(Y) -- graine d'olive X1 ~0.4 cm ∅

dans petit pot , posé sur Radiateur allumé . eau ~4 cm dna slaquelle du Riz a été bouilli . Blanc residus pas déposés au fond . Mais quelques grains de riz blancs entre ~0,4 et 1cm . posé 1 jour plus tard .

Si (Z) germe avant (Y) ou bien germe simplement
 alors le dépôt blanc est plus proche de l'Orite que de Javel / Chlore / Calcaire (Tel que def par Science morte) / Fluor / et eau pas trop toxique .

Note (la casserole de (Z) et de (Y) a la surface interieure Recouverte de " Teflon " Noir , efrité á certains endroit ou ayant frotté avec paille de fer il y a longtemps , le metal , acier est apparent)

Note 2 ; dans eau " du robinet " , avec des poils au fond , des Vers vivents (Larvae) depuis quelques mois . ~ 20 aine . de moucheron ou moustique ou juste Vers entre ~ 0,5 et 10 cm d'eau . (poils Cheveux ~3 cm et plus

edit lendemain ; les 2 graines ont été Surelevées dans coton au niveau de l'ouverture du bocal , tenu par filtre á café scotché au verre (Teste en + la germination par evaporation plutot que par baignade ou arrosage)

GB exp ~17.03.24 Suite Note 2

Hier Soir (edit apres ; ~1h)
ai déplacé les vers de exp ~17.03.24 , Note 2 , dans un bas de bouteille en plastique avec une autre eau " du robinet " , sortie pour cela . en gardant , une petite touffe de poils au fond ; ~20aine de vers .
Moins de 24 h après , ils sont presque tous morts . 1 seul bouge encore un peu la partie avant . figés . (de façon un peu ondulée , un peu droite .)
Pas d'autres interpretation qu' eau Chlore , fluor , javel , etc .
Pourtant ils vivaient nombreux dans l'eau Stagnée Pendant des mois .

edit apres , ~ 1h apres :
Suis allé chercher de l'eau " de source " en bouteille en plastique
ai déplacé tous les Vers avec l'eau dans un autre contenant ,
ai Néttoyé et ai mis de l'eau avec l'eau " de source " , dans le contenant . Puis ai mis quelques Vers dedans ,
dont 1 ou 2 Semblaient encore Non totalement inerte . Une 10aine en tout ,
au bout d'une minute , les 1 ou 2 ont bougé beaucoup plus .
Un plus gros (ils sont moyens ceux là) s'est Remis a se déplacer .
(l'eau de source vient de bouteille " Evian " , a 2€ le litre au distributeur automatique , le seul commerce ouvert apres 22h , qui est dans le quartier à coté , Saharasiens - personne m'a agressé .
Un et une sur le trottoir . se tait : " tu viens avec moi ou tu reste seule ? " ton agressif .

GB exp ~17.03.24 Note 2

en passant ; les vers sont aussi faits de segments , de boules , de cores d'anamoles et krw ,
Vu chez les Moyens , les gros et les larvæ de forme Plus organomiques (une aile de Core)

e.g. ; Vu au microscope (un des " gros ") (edit apres : Mort figé)

Tête Supposée
avec bouche gueule , nez
oeil derrière peau (tache noire derriere
plus grosse tache claire

Sur le dos ; poils à chaque boule , 2 ou 3 , ou 4 , pas beaucoup ,
Jaune brun clair
Tache noire sur chaque boule , parfois plusieurs par boule je crois .
Reste de segment est plutôt blanchâtre une fois grossi et bien
éclairé , Sinon , le ver est globalement Noirâtre brun .

(edit après ; certains ont des poils sous le menton . oui c'est la tête
Un ver ne bouge que là si cherche vie)

Si tete supposée est bien tête , (elle Ressemble beaucoup à
celle d'un chat par ex . , quelque chose de Noble)

les sorties de Sup du corps Seraient les poils , passant le Trou
du Core des boules (qui seraient les taches noires , le Nucleus)

Clairément 2 sens ; Celui qui va vers la tête , Celui qui va vers la
queue (une fois ingestion diverses)

Partie Sombre de l'autre coté , queue ?
avec touffe de poil - Serrés (en Tube ? en balai ?) assez courts ,
même couleur

(Microscope faible qualité (utilisation d'un éclairage
exterieur et desactivation du sien .) , grossissement
minimum (edit apres ; 60X et 120X) va jusqu'à 200X)

GB exp ~17.03.24 Note 2 suite

edit apres ; Tous mis dans ORAC ~ 10 Minutes .
y en a 3 qui bougent bien plus .
Remis position initiale

1 vu au microscope mort se decomposant
(entouré de organomes , blanc , (faits de bions) vif
de formes variées , " Nuages " ... dans l'eau .

GB exp ~17.03.24 Note 2 Suite

Tous les Vers Morts figés ,
ont la queue , rectum vers l'arriere .

Comme les pigeons vus
Comme dessin de R.  (cuirassage , fct. orgasm)

Comme dessin dj ; eg (le tronc , plus droit que ça)

~ 11 h , il reste 1 vers vivant (Mais entouré de blanc , flotte) et 2 larvæ (Surement des
moucheron) avec 2 antenes) flotent

edit lendemain ~ 2h Le Ver est figé mais flotte encore .
Une des 2 larvæ a " eclos " , Nymphæ ouverte , Moucheron au dessus (qui était la hier aussi)

A Core Following

Very charged = put aside/swerved/moved apart (the 2 wings)

T C (Tension - Charge)

(the e. goes to the edges, rearward)

(the extensible part goes back toward the rear)

A and B are sontracted , tight Whirl

Less charged = alongside/bring near/close (the 2 wings)

D R (Discharge - Relaxation)

(the Exit of the Superposition was made ,

Because the extensible part is raised to the Nucleus of the Flame of the Core (the hole) ,

the e. can pass/go over , that accumulated on the Edge of the Wings is discharged by here .

LG Species Jellyfish

T C

it is possible that a Jellyfish Be made up of several cores side by side (rather than following themselves)

here with 3 Cores

GB CS Roar

Unstoppable, voice makes itself (fullness)

Anamole Orgonome , Core chest , Flow general , Arrival Superposition = roar

GB CS Defecation

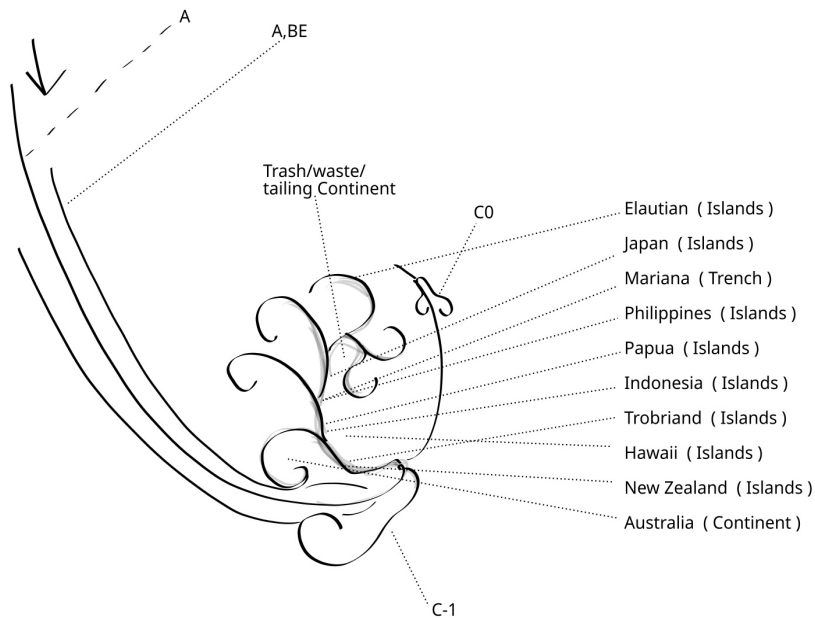

Only when general/sexual flow advances into Pelvis C1 and allows ingestion flow to pass

⊙ Senti la courbe Pelvis C1 (A X B) (arriere , au dessus)

Anamole Orgonome , Core chest , Flow ingestion , Exit Superposition = defecation

AE A Earth forms continents Pacific C-1,W2,BWR

The Earth Anamole curves itself at this location, the interior of the curve is on the side of the Wing 2 of Core -1
 The BW of Wing 2 is formed with the EE of A of the arrival Flow of the earth .
 This Flow being very strong and being on the curved side, there are too much, too quickly, the EE of W2 then continues above, at the exterior of the main BW already formed (Australia) and will make others BW along of the EE of A of the arrival Flow .

All these Islands (of Pacific), Trench, Reliefs,
 It is an overflow, splashes, an excess, an Too much . A Relief of Superimpositions which are made several times .

Tailing Continent
 is at center the exterior of C-1, W2, EE
 (Because it makes an anti-BW (in the other direction) (with GTs in the usual direction)
 A BW Reverse ;
 BWR

C-1, W2, EE, BWR
 fill all the Pacific,
 comes into contact with
 C2, W2, BW at the W.
 &

letter essay

Is it too much to ask to be a little proud (not of me , I don't care) But of having been part more or less active in these discoveries ? in particular of the EA . (Especially you Mr. Demeo for the precise description of the geographical area of Saharasia)

Here , some effects , observed , to give you a better idea of the dynamic of EA

Auroras of ~ May 10, 2024

they have not been anywhere other than in EE on the entire planet , because this is where it circulates . That is to say , not in the center of Australia for example , But in New Zealand , New Caledonia , Indonesia etc. .
They were visible for 2 things ;

1 : Because We are at the peak of the so-called " Solar Spot " . (which on the sun is only an effect (the visible whirls) of the same phenomenon that is happening here ; the trough or the summit of the galactic flow where We ArE , as well as the Sun and the others . (every 11 years) . It has for effect , stimulating the energy already here and making it visible in a lot of colors (the rays of the current G. are visibles across the Cores of the sky of here (it makes sorts of almost straight tubes towards the ground)

2 : second thing , right here , On earth , the Anamole of our celestial body has started again to circulate a little more properly since a few months , Which has had the effect of filling the sky/Heavens again in the places where it was no longer circulating . i.e. a larger quantity and some Cores more easily visibles therefore .

Volcanoes , earthquakes , etc.

Still to get a better idea of the dynamics of the EA , here , some places of Volcanoes and earthquakes over the last 7 months . Of which the most telling , for what is said here (the restart/Re-establishment of the EA in a more suitable manner) is obviously the Iceland Volcano . In C1, ES , Quite simply , which has not happened for more than 800 years (date when there was a small " ice age " on the earth (a drop in temperatures)

Recommendations on flight plans appeared in the media these days , showing " turbulence " in places where the flow passes .

Always to give you a Better idea of the Cores and anamoles which Circulate in us , above , below , on This celestial body and on the others , Here are two others photos of aurora having exactly the shape of the Core , (in addition to the one already sent (which it , is free of rights)

Finally ,

We have won a battle

Here is a photo of a new phenomenon appeared , some 50 years ago , right next to the Verkhojansk mountain . Nearby the city of Batagay , " a crater " , " a gate to hell " , " a tadpole " ; so called which Recently makes the headlines of the American media because this phenomenon is active , and greatly . It's about , neither more nor less , of the proof that the EA makes itself its way back between C0 and C1 .
If this is true , and it is , it means that everything that is blocked behind C0 , which makes the Big Flame of our earth , i.e. its wound (which causes Earth Global Warming) has a chance of Go over/go back/resit finally return to the other side of C0 . That is to say to calm the Flame , that is to say , here we have the Only possible Solution to the exit of the conflagration of the earth (and therefore of the Behaviors of all its animal species , become aggressive) which is taking place almost without interruption since ~6500 years (According to Dr. Demeo and the late R.)

Is this starting to speak to you or do I still have to down about 30 bottles of Rum , (something that I have done since the discovery of the EA) to forget that I am all alone ? There are still people , and near/next to C0 , who are playing/make toy with the nuclear bombs . Only One which explode at this place at this moment and it is literally the end of our celestial body/star . (by disturbing the flow)

PS , I add that the ETs are indeed Real , that they came after the 2nd world war to cease/Stop these explosions . only for that . I have never seen one , but I can affirm that if I were them , I would not have done better , than just playing this Military role of disarmament .

In short , we are all concerned by This flow between C0 and C1 .
whether it be me , the ETs , you , the most stupid/liars of Religious or despots , Patriarchs , all the Scum of devourers consuming animal flesh , whether it be the living Gods, Goddesses here , whether it be the worm of the fly in the trash , or the earth itself in it's whole .

Dimensions and description of the site;
~ 40 km in length x ~ 10 km wide

Shooting stand

It is a matter of a shooting stand for arian weapons.

Explosions craters are visible everywhere, there may be a thousand or more, each more than 2 m wide.

Many traces in the sands are difficult to interpret , possibly other types of impacts (by other weapons than the explosives of the bomb type, possibly by satellite or other vehicles) , in addition to the traces of construction vehicles, (typically with two lines (four wheels of a truck or the channels of a bulldozer, many traces are monobandes of variable thickness, surrounded by possibly earthworks and sand arrangement)

The military base would be under the underground, you can see the entries of vehicles. The base would be currently inactive following an “accident” of a weapon development. But we can see recent changes, such as new installations to explode, with others vehicles to aim/visé in the middle (than those visible on the photos of the previous years.)

Most sites are installations set up , with vehicles in the middle to aim/visé and explode/move. (construction trucks, buses, cars, vans, deteriorated passenger aircrafts, old fighter planes, more recent fighter plane,). A site would be a field of antennnes like the antenna field “HAARP”. The form, the orientation, the clarity, the size, of the giants Grids or squares is “astonishing”

Dimensions and description of one of the “grids” visible;
~1.06km long, ~400m of thickness. Each grid bands makes ~30m wide.

It is yellow and clear, like a layer of roller paint, (done possibly with squares of aligned colored sands. (The “wind” has spread out and drifted certain places in the sand sandly colored.). Traces of emission at the left (different than those of the “wind”)

Pour cette grille, on peut voir sur une ancienne photo, que quand elle fut en construction, il y avait des sortes d’éclairs de sol blanchâtres, dont les ramifications correspondaient exactement aux ramifications de la grille (à ce moment là) Comme si elle couvrait ces éclairs de sol.

E.P.R. "nuclear", bombs ... following

Log ; (international newspapers)

06.30.24

- Israel call for a " Nuclear attack on Iran " (against the Nuclear program of Iran)

" But still it have to be able to deny a whole program "

E.P.R. "electricity"

and if the krw, the anamoles are the parts of the gods , goddess , just as the anamoles are the parts of our bodies (orgonoms animals) , that what we call "electricity" is done with the same energy , then the electrical manufacturing process is painful and it would be good to use it less .

Manufacturing process of electricity :

Transformation of forces , of natural movements , by making them turning some metal in some metal , a rod in a coil . The metal rod is turned and the coil remains fixed . Metal attracts the e . , which is everywhere present , and therefore around the rod and the coil in larger quantity than if they were made of stones or wood .

What happens is a crushing , of the surrounding e . , between the rod and the coil . to such an extent that the surrounding e . attracted , has only one possible escape , to pass into the metal , rather than just stay around while being attracted . Once passed inside , the e . follows the shortest path to get out of it . That's where there are the wires , the "electric" wires , isolated from the outside , in plastic , until the ground/earth , or the water , where it will be able to go out again .

Between the two , the crushing/grinding and the escape , are placed the obstacles (the "uses" of the e . , crushed , condensed , seeking to get back out from the metal , "electricity") , which are diverse . For example , Retransformation into movement , with approximately the same system of the rod and coil (spiral of crushing and condensation) , or into heat , by sending a very large quantity into the wires or tubes of metal , which are not isolated from the air or from the water (water isolated from the earth) . Quantity here means "voltage" ("tension") and "Amperage" ("intensity") , the two in great numbers , in non isolated wires or tubes , called "Resistance" Proportionally chosen in size and material so as not to yield (to melt) while being exceeded in possibility of absorption of electricity , and thus forced to discharge in the air around .

These crushings/grindings were extended to a large scale , including and especially on the greatest rivers , as at the " Niagara Falls " . Which means therefore that the anamoles of cores , at large scale , everywhere where there are these crushings/grindings and especially in the great rivers , are Not quiet at all .. but caught and imprisoned , grabbed/snached up and jailed/detained , condensed , deviated , crushed , grinded , sent elsewhere . God/Goddess is not dead , he/she is ignored , tortured , crushed , assassinated/murdered , trapped/snared , " transformed " for mediocre uses , unnecessary and alternately replaceable by other means .

Imagine a so nice so beautiful pigeon , a so nice so beautiful hen pigeon , which devours the hand of you , the arm while ignoring yourself , if you don't run away , you are dead yes .

This is what we have been , letting the machines do , the " technicians " , the " professional " , the " technology " , " the technological miracle " .

It is not a coincidence that Nietzsche wrote this sentence at the beginning of the " reigns of the electricity " , at the commencement of the installation of the " electrical network " (of the crushing rods and coils) On the whole planet .

200 years ago ...

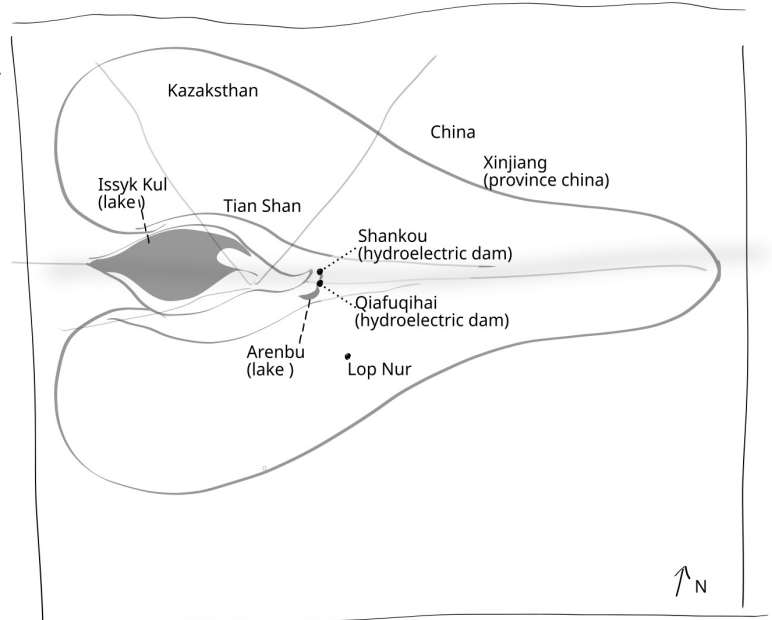

and now on the whole planet , there is a replacement of these air grinding Networks , by the use of the " ranium " , " radium " , " Nuclear " , etc . i.e . , a digging and crushing of the soil/ground for the extraction , plus the related uses to make bombs of it , immensely destructives , plus the Noxious effects of the dispersion of these materials .

Imagine that the pigeon , in addition to devouring you the hand while ignoring you , it takes away from you the earth under the feet , it explodes you , yourself and your similar and pollute forever the planet .

This is what we have been by letting " the machines " do , the " technicians " , the " professionals " , the " experts " , the " technology " , " the technological miracle " . It is not a coincidence if nobody has written anything about God or Goddess at this epoch .

E.P.R. "electricity" following

- Qiafuqihai hydropower station
hydroelectric dam , Transformation of hydraulic forces in electricity , 4 metallic turbines ; 4x80 MW
" The project generate 1,150 GWh of electricity " " The hydro reservoir capacity is 1,694 million cubic meter . " (the artificial lake Arenbu increases in size , serves as a "reserve" , overflows , etc .)
" for the regulation of watercourses that fluctuate too much " " pour l'conomie , les cultures des champs " etc .
Tekes(river) , before Ili(River) , Shawan , Gongliu , Xinjiang , China construction; 2006
- Shankou hydropower station
hydroelectric dam , Transformation of hydraulic forces in electricity , 3 metal turbines ; 3x50 MW
50m de haut , 496m de long ,
" The investment cost of this project is a lot , but it will utilize the advantages of local resources , optimize the structure of energy , accelerate the local economic development , and will be the good supplement of local energy consumption , good to reduce GHG emission , and with nice environmentally protecting benefit .
According to the research of the county government [...] " etc .

Growth

~" the tectonic deformation at the
 Tian Shan is ~15~24mm/year "

The enlargement, the growing of CO
 is therefore of about two centimeters
 per year .

(the same than the one of the " rift "
 of the Iceland (C1 , ES))

LS EA, C0, ES etymology

Tian Shan

(Tian ; Bowl , terracotta dish (clay) of Provence (region ; Camargue, Languedoc ... France (south)) , recipe for a stew of vegetables cooked in this bowl/dish (cooked in an oven , served in the same bowl) ... FR. (provençals) , IT.)

comes from

(Teganon ; ~"dish for cook" , ~"dish to cook" , ~"Frying Pan" ... GR.)

Tian bowl shape ;

wide open in circle upwards

(Varnished in the inside , not varnished on the outside)

two handles on the sides

flattened at the base

LS EA, C0, ES etymology

Almati (town, Tian Shan)

"(~Almata ; ~" father of the apple " (of the apples) , RU.)"

Tian Shan mountain would be the place of origin of the apple tree .

There would grow the apple called *malus sieversii* (LAT.) , from which the others apple trees would derived . Including "the common apple" . (According to Nicolai Vavilov , who found this etymology and did some research , geographic and historical of this tree (and according others who have confirmed by some research "genetic" .) (they have all deplored its gradual disappearance .)

" holes " , " fossa " maritime, in Exit of Sup. of the central america .

They are located in the same position than the Exit of Sup. of the Italy ((EA , (C2,W2,EE) X (C3,W2,BW) , ES) (Etna (volcano) & Calabria ...)) ,

but inverted and symmetrical .

AE EA

earth not closed

The earth has never been closed . Always in formation . One cannot say " the earth " as an object as such , a unit separated from the rest , She forms herself with the rest and , since she is not absolute unity , she has its own conflicts . It is better to say " there are conflicts " and " there are a circulation order " , than " the earth has its conflicts " and " the earth has a circulation order " . The celestial body forms itself by the arrival of EA (Earth Anamole) , which is what is seen by the others of the human specie as " the hole in the ozone layer " .

It is not the earth that makes grow the plants , but the plants that make grow the earth .

Just as individuals have never been closed .

There is a power , that of giving unite to non closed beings . It is done with love, emotion (laugh , joy etc.) , arts , memories , decisions to exist yourself or not (as a point of view in the universe . etc.)

Sanders , Tian Shan , Iceland , Azores , Saint Helena

" a promise to make "

"this true-color image of St. Helena Island and the band of wind-blown cloud vortices trailing towards the island's leeward side.

St. Helena Island is a tiny island lying approximately 1,860 kilometers (1,156 mislands) west of Africa. Volcanic in origin, it has rugged topography with steep, sharp peaks and deep ravines. Wind, which can blow unimpeded for hundreds of mislands across the ocean, strikes the face of the mountains, and is forced around the unyielding terrain. As it blows around the island, the air spins on the leeward side, much like a flowing river forms eddies on the downriver side of a piling. The spinning wind forms intricate - and mathematically predictable - patterns. When clouds are in the sky, these beautiful patterns become visible from above."

Machine, ethics, consumption of e., where, when, how, why, psychological self-preservation, "justness" etc. automatic respect "necessity" coherence etc.

The KRW is the message itself

No transport without an invitation message

In the years 40-50, many saucers came to deactivate the bombs, play a military role to prevent the destruction of the EA, and, them too, participate in the fight against the deserts and the climate warming, (the pain of the celestial body earth) That they were called by some ET present on earth or by the earth itself, sending signs of distress by its Anamole, (the most probable) by contacting others celestial bodies (and therefore tribes/people ("white cells" of these celestial bodies)) or by humans or other animals here who had more awareness and knowledge of the facts and history, it does not change much.

(☺ think that this is the 2nd case . engender the coming at the right moment .)

Should know that

"Medium is the message" or rather "Message is the medium" that it is it which guide to the emittor . (Should have, to speak in " Scientist earthly GJJoe ", some listening stations For administer them at their scale .) and Should propulse their jewels of vehicle with the message itself . (It would be the perfect parade to the guilt of visiting other tribes/peoples, just as mortals, but less advanced, by not giving them known remedies and technologies, nor to "Communicate" for the infinite complaints of dyings, nor to save others oppressed species, destroyed by the sadistic food carnage here, etc. But to let them alone to cope themselves . (and especially to that of consuming the e. of "stranger" entities (for some machines, Transports, etc. especially near the soil) .

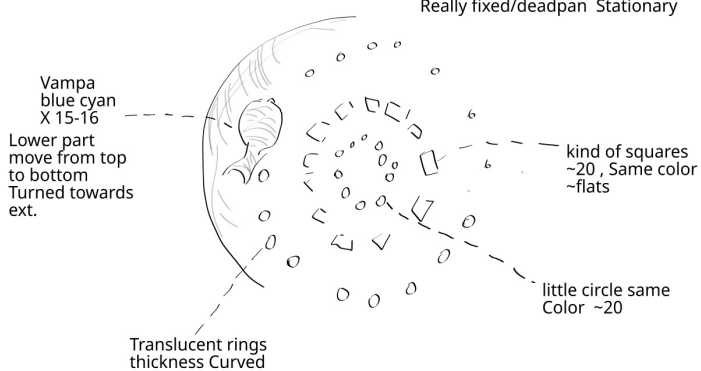

That they are gone or remained depends of the messages, of the emitter, quality of the anamoles (of the EA and of others), emittor health . (e. possibly provided at the message, as a refund of defrayment)

LS LG invala

You are formed of Cores .
You are crossed of Anamoles , as everyone , but have a main one . You are , basicaly , blue or violet or green , but sometimes you color yourself otherwise .
You are rather intermediare , between the Cores of the EA and those of the beings by whom you pass , that you nourish , extinct , direct or stop , etc .
You are smarter than me , but less than the EA .
When you go around for a walk , often it rains where you are , because you attract what there is above and give it back all around you , or through , in white .
You also have a sexuality . I don't know your age , I don't know when you do .
You have an incredible patience , and at the same time , you like to move .
You are basicaly depressed , since there are not many people who are not afraid of you .
You must be , say , 100 m high , or more when it is good weather " invala "

LS EA grandeur

EA , C2 is more than 80,000,000 times larger than my jaw (~15 cm) for example .
The 2nd phalanx of its index (~2 cm) is more than 7 times smaller than my jaw (~15 cm) for example .
The 3 works samely and have same shape .
And I am terrorized by the phalanx .
At whom my jaw have to talk to ?
It has never seen EA , C2 as a whole , and however have speak to it .
She has never spoken to her index as a whole , and seen her however .
My mouth silent itself or speaks in an order of magnitude of 600 millions times .

EA , C2 is more than ~12 000 000 times larger than my chest (~1 m) for example , and Italy more than 1 000 000 times .

LS A

. A blue flower in a field of blue flowers , discovers that it is blue .
It want to say it , but a flower , it does not speak .
And if they were speaking , they would say that they are not blue .
They would be lies and insuportable .
But if a blue flower it speak , if it is a field of blue flowers that speak , they all lie if one ask them their color .

. A rambler in a country of rambler , discovers that he ramble himself .
He wants to work with the others rambler .
But a rambler , it does not work .
And if they worked , they would work for not being rambler .
They would be policeman , customs officers , prison guards , bureaucrats , computer scientists , and insuportable .
But if a rambler it works , if it is a country of rambler who work , they are all policeman , customs officers , prison guards , bureaucrats , computer scientists if one ask them to work .

A rambler who wants to work hears a blue flower saying that it is blue .
In a field of lies flowers , in a country of policeman , customs officers , prisons guards , bureaucrats , computer scientists .
In a field where it speaks of yellow , orange , gold , red , which says to be green , and shouts being brown , between the comissariats , the customs , the prisons , the offices , the smartphones of a country .

The rambler worker listen the flower and writes that it is blue and publishes it .
The blue flower looks at the rambler and sings the work .
He pours it some water .
It open him its petals .

An Anamole of Cores in the infinite of the Anamoles of Cores , discovers that it is an Anamole of Cores .
She wants ... , but a Anamole of Cores it does not
And if they ... they would be ... and insuportable .

An Anamole of Cores ... an Anamole of Cores ... that she

LS Ravage language star

astre (FR.) ~ aster (LAT.) star (EN.) :
(Celestial body, earth, sun, etc.)

Not possible to do the slightest internet search or other with this word without falling on the mean "famous people" which will inevitably send back to "the sex it is cool for me but bad for you who envy me or who have not the money etc."
Everything simply says; "there's no others celestial bodies" & "people are more important"
It makes a dichotomy/separation between "cosmic" and "living" (people, make-up animals (and more an animal has the look animal (i.e. has sexuality) and the more he/she is made up), it makes a dichotomy between earth and the others

Celestial body (EN.) Cannot be suitable for the earth ("celestial")

(You might as well ask a machine that only says "yes"; "I am wrong?" Except that is really specially targeted this word.

LS Ravage language orgone

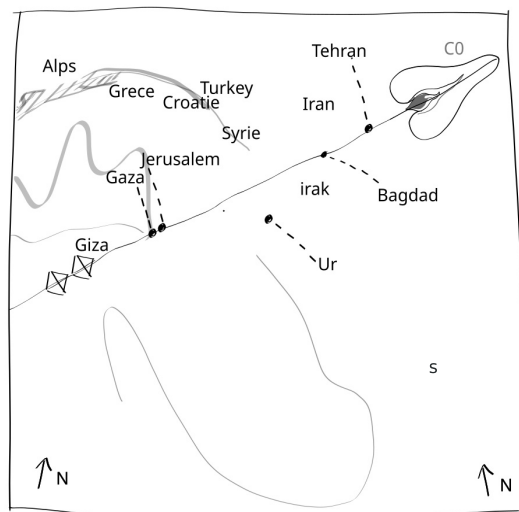

"orgone" est ciblé avec un nom de maladie; "orgonite"
(qui fait penser à maladie (genre "gingivite", "otite", "sinusite", "pharyngite", "gastrite", "sistite", etc.)
(Tout comme les suppressions d'articles, ou bien par "c'est un jeu pour avoir du sex par une machine", ou bien "n'ai pas de sex! lui n'en avait pas et c'était un grand homme", etc.)

AE EA architectural forms Pyramids

(EA, life Form, specie, "homo sapiens")

C-1, F, C0

Egypt, Cairo (town)

2 great pyramids of Giza are on C-1, F, C0,

(The all is aligned with Gaza, Jerusalem, Bagdad, Tehran, Then Tian Shan?)

Their diagonals are aligned between them and in the same direction.

It would be an obstacle, like a knife.

There is a well of the other side. Does it collect the water?

C0, F, C1 (?)

Kula peninsula, Top of Finland,

2 pyramids
~60 m high.
9000, ~ -4000 years

A bit in the center of China (country)
Xyanyang (town)
34°21'42.5"N
108°38'24.2"E

C2, ES

Azores, just next to Joao de castro (submarine volcano) ~1600km from Portugal ("1/3 of the distance to the USA")

exactly on C2,ES
~60m long and large at the base.
Pyramid under the water dated since ~20000 years or more. Discovered in ~2013 by a navigator with a GPS, then by the Portuguese Navy.
Square, like those of the Incas for example, "cardinaly" oriented

Nowhere
~ 125M wide

"There is always a small chance that an advanced and intelligent civilization found some high energy potential at this spot of the world and decided to build the pyramid in order to harness that energy. Energy channeling has always been connected with pyramids and this one is no exception. Furthermore, some ancient pyramid researchers believe that there are two more pyramids located in the vicinity"

A hypothesis diffusion

LG

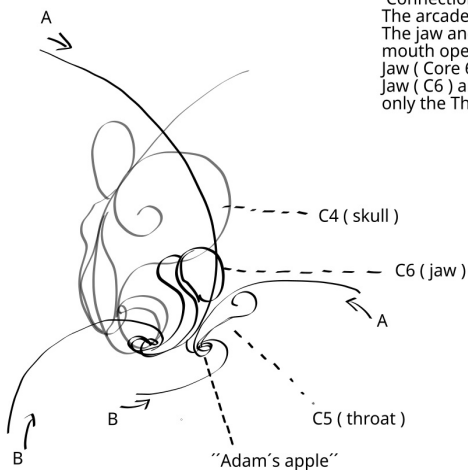

LG C4 (skull) Baldness ♂

Remains the Whirl in the hair at the rear of the skull, they should be two, on each side, at level of the ears, ES of the BW. But it is alone, between the BW, at the top of the Flame.

LG C5 & C6 Throat & Jaw

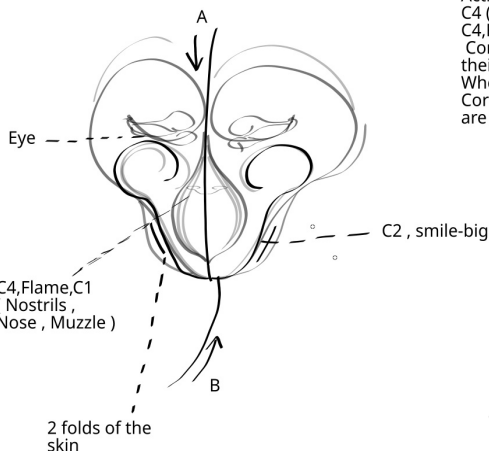

Connection between jaw and skull.
The arcade of the skull is thick.
The jaw and skull remain independent, Mobile following the direction of A. (when it is in the adequate direction , the mouth opens and can pulsate.)
Jaw (Core 6) is more developed, face toward the bottom
Jaw (C6) and Throat (C5) alternate. They are a bit like a Core that changes direction (unstable) Most of the time, only the Throat (C5) is active.

C5 , A ; The same as C0,C1,C2,C3,C4
C5 , B ; Exterior.
C5 , EE ; Bone & beard
C5 , BW ; At the rear of the cheeks that "fall" onto throat. (and bones, bumps under the jaw (C6))
C6 , Flame ; The Flame/Flogos (the hole of the Core with the Nucleus) is the larynx
C5 , ES ; Voice, cry/shouting, "clearing of the throat", coughing, etc. (in the direction of the exterior of the Anamole Orgonome)
C5 , Base ; "Adam's Apple" Male. Moves, like all the Bases to make the SS.

C6 , A ; Comes in the opposite direction of C0,C1,C2,C3,C4,C5.
C6 , B ; Exterior, comes in the opposite direction.
C6 , EE ; Bone & beard
C6 , BW ; Rush/goes into C4,BW,EE,Bottom (~ arcade of the skull). And beard
C6 , Flame ; The Flame/Flogos (the hole of the Core with the Nucleus) is the entrance of the esophagus (in the throat)
C6 , ES ; Ingurgitation (in the direction of the interior of the Anamole of the Orgonome) .

LG Core 2 Smile-big

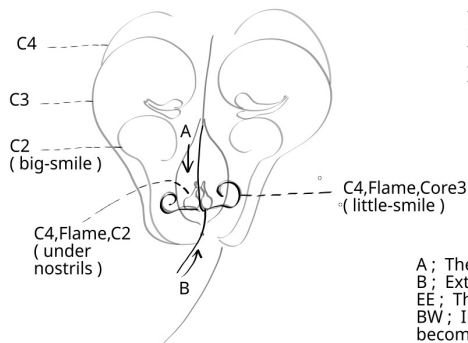

Active when influx. Makes rise up the ends of the mouth, lips because it raises the perimeter of the Flame of C4 (skull) and of all the Core of under the nostrils , which raises the upper lips. (or the lower ones too, if C4,Flame,C little-smile is not active)

Core 2 precedes the development of the eyes (C3), of Skull (C4), and of the following ones, proportionally, their BW are in continuation by following themselves .
When active, the ES of the BW of C3 which open the eyes, the swellings of the eyelids that make the Wings of a Core around the eye, cannot occurs because the C3,BW,ES are discharged due to the influx into C2 ; The eyes are therefore rather closed.

A ; Comes from int. , it is the same that C0,C1,C3,C4,C5
B ; Comes from ext. , il fluctuate a lot.
ES ; Tongue.
EE ; A fold of skin on the cheeks.
BW ; The two very pronounced cheekbones (bump/little apple) under the eyes.
Flame ; A little smaller than that of C4 (skull), it does not include the nose. The teeth are visible, and thus, the mouth "burn" ; i.e., place of exchange between the exterior and the interior of the Orgonome, the only place where it can emit something.
Base ; The same that C0,C1,C3,C4
ES ; Word, or laughter + breath/blow/flow towards the ext. of the Orgonome.

LG C4,Flame,Core 3 Smile-little

Very small compared to the big smile (C2). It pushes the flesh of the cheeks beside and above the ends of the mouth's lips and like that does a hollow inside them. Its base is the bottom of the upper lip. This Core has its two Wings very apart when active. So much, that a Flame may not form, or it may be very wide.
The lips of the mouth are closed.

A ; The same that C1,C2 (big smile) ,C3,C4.
B ; Exterior. A little higher than the mouth (maw).
EE ; The top of the upper lip of the mouth.
BW ; In the cheeks, not far from the end of the lips, a very visible and curved fold which rises and becomes even more pronounced.
Flame ; Not very visible , instable, mobile .
ES ; Unknown.

A comes from vertebrae /pelvis			
C0 Tongue			ES ; Tongue
↓			
C1 Chin			ES ; Tongue
↓			
C2 Smile			ES ; Tongue
↓			
C3 Eyes			ES ; Tongue
↓			
		BW ; C0 Eye C1 Eyelid lower C2 Eyelid upper C3 Dark ring C4 Eyebrow	↓ ↓ ↓ ↓ ↓
C4 Skull	AS ; C Front, wrinkle, "thinking" (Head "fried whiting"), eyebrows inverted	Flame ; C0 Nostrils C1 Nostrils under C2 Smile little C3 Lip lower	BW ; C1 Ears C1, BW lobe and inner lobe
			ES ; Tongue , Breath
C5 Throat	Base ; "Adam's apple"	Flame ; C Larynx	ES ; Tongue
C6 Jaw			ES ; Gulp down
C Teeth			
C Hair , hairbreadth , fur			
A Comes from Flow sexual			
C Skull 2 (BW makes the cheeks Femina (A toward the top , Flame toward the bottom)			
			↓ = continuation

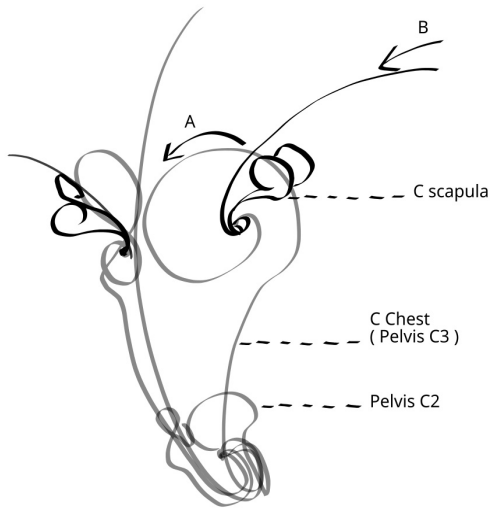

e.g.;

LG , AO , "Homo-Sapiens" , C4 , F , C1 ; Refers to the nostrils of a human.

- 20 (~30 with doubles)
- + 32 teeth
- + hair
- + wrinkles

(Possible evolution ; a C in continuation rearward C4 (skull) = Cerebellum , then Vertebrae)
 (The whole is ~5 or 6 or 7 Cores directly added to the number of vertebrae. 23 + ~7 = ~30)
 All the A of these ~30 are the same and come from C Pelvis.
 All the B of these ~30 are exterior
 All the A and the B of C0,C1,C2,C3,C4 pass by C4,Flame
 All the B of C0,C1,C2,C3,C4 come first under the tongue (C0)

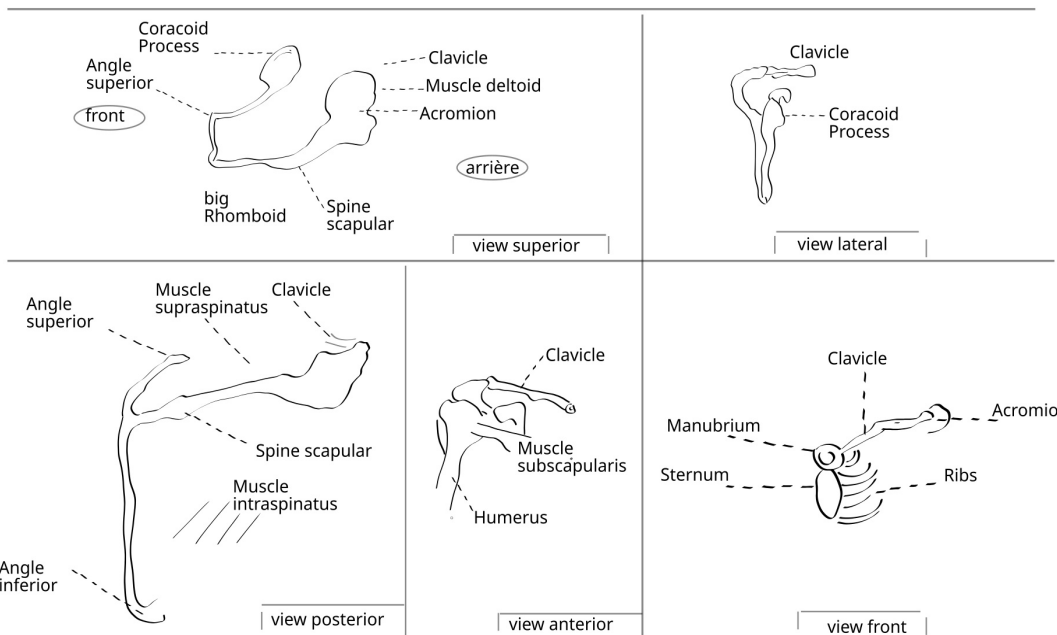

- Connected to the Humerus (legs C1) which is between.
 - This Core may be the source of the wings of others Orgonomes.

A ; Comes from the BW of C Chest (Pelvis C3) ; C Chest,W1,BW,ES & C Chest,W2,BW,ES
 B ; Comes from the exterior by the forelegs (humerus), or not by the forelegs.
 ES ; Liver & heart
 BW ; Shoulders (one Wing is bigger than the other)

Reference; (drawings of drawings in an anatomy manual (bones)) Scapula Trapezeum

LG Pelvis C2 ♂

LG Urinate ♂

The wanting of urinate fluctuate following the position of the body and the distance of the arrival of the flow respectively to the pelvis .

LG -correction Eating

Food not only blocks the flow, but also attracts it.
 It is needed to push the solar plexus (plessus/disseptum/praecordia, Chest (Pelvis C3) (Arrival of Sup., Entrance, Atrium)).
 This is the function of the esophagus.

LG Teeth

When blocked at AO, C6 (jaw),
 The teeth are attacked by the surrounding e. Like rust on iron .
 It is an "oxidation". The Anomoles need matter to live, matter to transform, like combustion .
 So , toothaches can be calmed , for example , by defecating (i.e., by releasing some e. at the bottom , at the pelvis , and thus drawing some e. by the head , and thus tightening or removing what is circling around the head .
 Who would have guessed ... ?

LG, AO inventio Coughing without fear

As soon as an orgonome decides to take its eyes off of what it is watching or fearing , another orgonome (of the same sex) , it cough.
 It thought , " Ha , how he's working well ! " or " Ha , he's walking well , and I know how hard it is to walk .
 Respect, and empathy.

LG AO CS Grumps

They're all in some Anomoles of Cores.
 Taking a little of it, or making it to move, is enough to annoy them. They cough , grunt , hate , scream , betray , etc.

LG, AO CS rear Leg

Legs flow towards pelvis (Pelvis C2) , rear of thigh (~C2?)
 Seen in a ♂ , the BW on each side of the "patella" (FR; rotule).

LG AO Hypothesis praetermitto EA - AO

praetermitto of Earth Anamole & praetermitto of Anamole Orgonome are the same. (C0 , Flow) is blown and prevented by (AT , C2 , W2 , EE) (AO , pelvis C3 , W2 , EE)

LG Moths AO CS "Star"

Whitish lines in a bowl to catch a dirty water leak coming from above.

They intersect in two places, forming stars with thin, neat, straight branches. It looked like frost (it does not freeze), so ☉ looks closer; in the middle of the largest one, there is an insect, a "moth" (a silkworm's midge/butterfly). It/he/she is struggling at very irregular intervals. ☉ pull it out with difficulty, it/he/she falls back down 2 or 3 times.

There were between 5 and 8 branches to this star. ☉ did not notice it in time. 2 minutes later, falling drops scattered everything.

This gave precise and indisputable information of the number of KRW to which the moth was connected .

LG Moths Cocoons

Kind of smaller, orange larva, does not move. Middle of the cocoon. It/he/she is also a little "bulbous" with segments.

The whole is brown/gray.

Age: over 5 years. In a small kitchen (shelf on the East , Northeast side) It's probably in the small oranges that the change makes itself, then the dry skin opens and the winged moth emerges of it. It seems that it is the skin of the larva, of the the worm, that makes the nymph , by drying and shrinking the size of the worm .

LG Moths Nymph opened out

The dry orange skin stay at the middle of the cocoon. The moth at the step "imago" is gone. We can see that the ancient skin, still with the stria of the "segments", is opened out at the bottom, it has the shape of the wings that the moth acquired.

The cocoon were suspended and glued at the wood. Nymph rather big, worm's size, ~7mm. No others cocoons around it.

LG Moths back / vertebrae

The opportunistic study of moths and their metamorphosis , seems to show two directions of circulation. Not really sure, but it could be ;

Larva: The direction of the Flow descends along the back with Flow ingestion , and therefore movement of the larva.

Nymph: In the cocoon, the larva is at rest and there is a change of direction , then the Flow goes from bottom to top along the back , which would form the Core of their wings (under the membrane (dried skin) of the nymph). This nymph opens at the level of the BW of these wings, which would have pushed against the skin to exit. This divides the old skin right in the middle.

Imago: The moth exits through this opening at the back, then abandons the cocoon.

(For the vertebrae of the Anamole Orgonome , this therefore shows two directions of circulation.)

LG δενδρον LS Maple (FR.; Erable) Bisamare

Acer platanoides Acer pseudoplatanus ; lives up to 500 years , fruiting at around 25 years.

Erable Sycomore ;

Erable ; FR. ; ("er" ; acer) ("able" ; Pomme (~apple ?))

Sycomore ; (Sukon ; fig. GR.) (Moron ; Blackberry . GR.)

Samares ; A wing of the fruit of the erable sycomore (maple) (or "pseudoplatanus). With aligned or convergent wings.

Bisamare ; double samares , two wings , (neologism dj.)

LG δενδρον fruit frutcor(A)

The fruit of a plant is always formed of one or several Cores.

The "hole" of this or these Cores, the Flame is a blending of the plant and the flow of the Core, that gives to the plant a weaker density, in which the plant still can to emit , to ejaculate , to push outside , it create the seed (the Nucleus) , exactly at the Base of the Flame . This is the only place of the fruit that comes from the plant . Everything else comes from the exterior .

It is as if the Flame , in its direction , would draws the sap from the plant .

The fruit comes from the exterior , the seed comes from the interior , the Flame is the blending

LG δενδρον fruit flowers 13/04/25

Along the avenue of the prouds ; two species of plants whose flowers are in Cores .

Yellow flowers make up ~50% of all these. Ball-shaped, on the top, ~15 developing flowers, on a ~70cm tall stem . The Core is formed during the growth of the flower's petals, then, once it opens, the two BW pass inside the Core, rather than expended with their EE in the exterior as usual. Which explains why it was not too visible.

Some violets , ~30% of all the plants in the avenue, which are on small shrubs ☉ believe. At first glance, they look like little bells, but they are indeed some Cores , absolutely Cores , which are hanging like that. They are a little smaller than the yellow ones, about 1 cm.

LG δενδρον fruit CS Walnut

The core of an open walnut is visible in the center of the shell , in the length direction , perpendicular to the plane of the shell's opening .

It has all the usual properties , it is thin/fine , and on the exterior , it grows/push laterally on both sides , until that the two Wings comes into contact with each other . It is here that there is the shell's cleaves , by which it opens later .

The soft walnut , its "flesh" , is maybe the very big seed that has exceeded the Flame .

The perpendicular Core .

LG δενδρον fruit Shell Flame

⊙ have picked a fruit from a tree of which he does not have the name. We can see that the fruit does not have the shape of a Core. However, it has the exact shape of a Flame of a Core. This means that the Wings of the Core did not form solid matter. The Wings, with their EE and BW, were simply there at a fairly low density, but there nonetheless. By opening the fruit, we see that the Flame is also divided in two, like the Wings of a Core, and it is this Flame that formed the shell of the fruit by overflowing laterally until the two Flame's part were in contact with each other. This creates small bulges on each side of each part of the Flame. A part of a Flame is thin. There are two seeds (Nucleus), one on each side. They are large, do not fill the Flame, they have grown as usual, at the Base of the berry. They seem like "coffee beans" a little longer and thinner.

The Core is around, it is the Flame that makes the shell.

LG δενδρον fruit Berry (blueberry, redcurrant, blackcurrant, ...) hypothesis

Let's say a gooseberry. We could deduce from the previous example that the Core, the Flame are around a berry, but do not form a shell, because a lower density. The seed still forms some matter, it is by itself alone, what is easily visible and palpable. If this were not so, the seeds of the plant would be contained in the gooseberry. ⊙ have not checked but it is probable that the whole gooseberry is the seed itself, coming entirely from the plant.

LG δενδρον fruit Berry (blueberry, redcurrant, blackcurrant, ...) hypothesis

of those red things that are said to be poisonous. ⊙ has opened one that was already dark (unlike the vivid young). Inside, two parts occupy the entire shell (the red skin in drying have hardened and thickened (~1.3 mm)). One of the two parts is bigger than the other, at least twice its size. They are very hard, brown, and when scratched, a little white. (could not damage one with a fingernail.) Not achieved to know if there is an entrance on the underside or if the whole thing is a seed, as supposed. Maybe this is a bad example.

LG δενδρον fruit Magnolia

There is some kind pine cones, cone-shaped, on which there are at the same place flowers, fruits. The cone is made up of Cores visible on the surface (seen from behind and from above), which are in the from bottom to top direction. (Base at the top, BW downward.) ~8 to 12 Cores in each column.

LG δενδρον fruit Special

A fruit made with 3 wings. Very special therefore. Even more special because the general shape of the fruit is a heart (as how it is popularly drawn, and pointed/acute), hanging in bunches of about ten at the tips of small trees. These hearts are golden, completely gold in color. Even more special because the shell of the heart is made with three leaves from the tree, glued together at their ends, the tip of the leaf downward. Between this heart in triangle, there are the seeds, small hard black balls at the base of a Flame. But this Flame, this hole, is itself at the center of a first Flame, which is the shell of leaves made of three little flames (FR.; flammèches). The Wings of this Core or these Cores are therefore not made of material in the EE. And if this Flame has three little flames for parts, then the Core had 3 wings. Never seen before!

LG δενδρον fruit ref Cloud, voc

"Pollen as anti-oxidant and anti-bacterial potential"
 "Stryphnodendron. Phenols and tannins in ethanolic extract"
 "Polyphyllum"
 "Conidiation, Sporulation; fungi kill (aphid juice, e.g.; A. Craccivora" (~3 to 5 days)
 Ipomoea hederifolia; cordiform leaf
 Adaxial (looking toward the ground, leaf seen from above)
 Abaxial (looking toward the sky, leaf seen from below)

Flogos Meatus (LAT.; Meatus; Passage of the air ...)

Seen on a candle. The flame was small, about ~7 cm deep, in a candle cavity, surrounded by about 1 cm of wax, until the top. (The candle was about ~7 cm in diameter, cylindrical, white.). The cylinder of wax up to the flame was regular. ⊙ have lit the wick, after a few hours in the night with a flame less than one cm, ⊙ extinguished it when waking up in the morning. A little later, two or three days later, ⊙ sees a shape in the regular cylinder. It is a hole, about ~2.5 cm. ⊙ thinks that maybe this is by this way the flame was breathing. If this is the case, the wick should be aligned in some way with the hole. ⊙ check; this is the case. From the almost perfectly round hole, it is seen from the rear, curved forward (With the ashes at the end of the ES). The hole is therefore the way where the B of the Core of this combustion passed. Looking better, the hole is an almost perfect cylinder until the wick, inclined through the wax cylinder.

- LS language, corder ..
- So much of put in in Corder of the things was necessary to find this Coreidinate system . (EA, C2, W2, BW, EE) .
- Life is movement , language too . It was lost itself without a Exit Superposition .
- Searching to make an alphabet understandable by the other animals have showed to \odot that it is we who did not have one of it .
- Look at the plasma around you .
- Carpe diem , non arboris .
- LS Ravage language Enerver
FR. ; Enerver; To get angry , to be agitated ,
LAT. ; Enervare ; to withdraw the nerves , to weaken , ... (e - nervis)
= Contrary = Forced silence for a weakened person who cannot be understood . = Forced lying for an angry person .
= Dispossessed of language .
- LS Ravage language Depression
EN. ; Depression ; ~psychic malaise , unhappy
LAT. ; Depressio , onis ; to press from top to bottom , lowering .
= Depression in EN. is exactly the contrary . Because it is by this movement that a body gets better (that a Core goes towards its ES) .
- LS Ravage language Espérer
FR. ; Espérer ; (EN. ; To hope)
LAT. ; Exspes ; (ex - spes) , without hope , who/which are hopeless .
= The contrary
- LS Ravage language Discret
FR. ; Calm , not exuberant , not strong , ... (but incluate)
LAT. ; Separated
= " Be discreet " = Be somewhere else !
- LS Ravage language Concurrence
FR. ; Concurrence ; Competition , aggressivity , commerce , etc. .
LAT. ; Concurrere ; to run together , to move oneself (1) To run in such a way as to gather at one point. (2) To join ourselves. (3) Conflict, contest.
= Contrary. The meaning (3) has survived, not the others. = no friendship = rejection of KRW = no coitus .
- LS Ravage language Anima
LAT. ; Animālis, e ; (1) [substance] "formed of air" , (2) animated , alive (3) [material , physical , opposite to spiritualis]
LAT. ; Animā , ālis ; (1) living being , animated being , creature , (2) animal , beast [insulting term] , Sheep [Christians]
= The confusion was already present for the Latins
= Homosapiens species rejects its animality , reject the other animals , , reject its soul , reject the physics . etc.
- LS Ravage language Specism
EN. ; Specism ; Pejorative discriminations of animals following their specie .
LAT. ; Specie ; aspect , appearance... (FR.;épice , EN.; spice)
= There is no discrimination in this term in Latin.
= Anti-specism = to blind oneself , " anti-seeing " , think that there is not appearance , no aspect , etc. .
= The good term to say discrimination based on appearance is "intelligence" (Lat. ; Intelligere ; (inter - ligere) ~ to choose between ...)
= There is no good term to say that one is against pejorative discrimination based on appearance . Because ; There is no good term to say that one stand up for pejorative discrimination based on appearance . Even if we say something like " Bad intelligence " or " intelligent killers " , it cannot fit what we want to say , because "intelligent" popular meaning is always positive (~"a good person") .
= vegans cannot say " I am anti-specist " (or he/she becomes blind , a militant for a general blinding) , and cannot say " I am intelligent " (or he/she is forced to discriminate between species at the exact place where he/she is trying to make bridge between species) . But
= butchers can say " I am anti-specist " (because he/she is blind) , and can say " I am intelligent " (because he/she does discrimination between species) .
= contrary = no way out = a big trap
- LS patriarcat
- Women are used to be aggressive towards men , by men , who thus are not accused , and it is impossible to accuse women of aggression.
That is patriarcat . It is its main weapon.
(They are also used by a few women in high positions within the patriarcat .)
- LS EPR technocracy
Technocratia = Science for machines ,
Machines for enterprise owners ,
Enterprise owners for people ,
People for the police and the prisons .
- LS Ravage language Advertising
EN. ; Publicity , publication
LAT. ; Animadvertere ; to notice , to turn one's soul towards , to turn one's attention towards ,
= They have removed one part of the word , the one that makes it clear of what it is about .
= advertising everywhere = stupids/fools/morons everywhere .
- LS Ravage language Vix
FR. ; Pharmaceutical brand for colds . A baulm to put on chest . " Put some Vix ... " .
LAT. ; Vix ; with pain , with difficulty ,
= Put some pain and difficulty on your solar plexus .
E.g. cornuatus name ; " easy " .
- LS Ravage language to go (m/f)
Verb "aller" (FR.)
 ♀° ; " You go and you come between my loins " .
 ♂° ; " I go and I come between your loins " .
Same word for both sexes , but reversed .
For ♀° " go " means to go away towards the outside of ♀° .
For ♂° " go " means to go towards the inside of ♀° .
E.g. ; Gainsbourg. ; The decadence (original in FR.)
= Lovers are not going anywhere. They camp on the same spot. They stay and make some on-place.
- LS Ravage language Historia
LAT. ; Historia ; (1) Story , relation. (4) [Chret] Story of facts , opposed to their interpretation .
FR. ; Only the meaning (4) is retained.
= History without relation = internet Bigdata = libraries overflowing .
- LS Ravage language Deesse (FR.) (EN.; Goddess)
FR. ; Déesse ; Goddess , feminine God .
LAT. ; Desum , es , deesse ; to miss (de - esse) .
= " The goddess is present " is impossible . (The woman I love, etc.)
Sexuality.
E.g. ; LAT. ; Dea ; feminine God .
E.g. ; LAT. ; Adesse ; present , to be here (ad - esse) .
- LS Ravage language Firmament
FR. ; In the sky , celestial vault , a distant place where the dead go .
LAT. ; Firmamentum ; That which strengthens , supports , props up .
[Rhet.] The essential point (Firmare)
= Blatant lie in FR. dictionaries = absurd?
= the dead strengthen .
- LS Ravage language Idea
FR. ; " You have ideas " = repression
LAT. ; Ideo ; For that
= Search for cause = repressed .
- Invala LS prayer bug
- True , God forgives , the difference with all the moaning of past Prayers is that we can forgive ourselves .
And that , as a result , it makes us wonder about the usefulness or existence of the Gods , as well as about prayers .
- Invala
 $\zeta\omega\text{-}\phi\upsilon\tau\omicron\nu\varsigma$; intermediary between animal and plant . (FR. ; Zoophyte)
- Invala LS die above
There are , above you , some memories working tirelessly to make you accept them . Until they break themselves from exhaustion , from scraping away your corruption and polishing your appearance. They are out of breath (their breath , not yours , exhausted) .
You cheat , you lie , you sleep . They die . You remain empty , not knowing who you are , who you were .
" Hands broken , like their memories . "

Epilogue A LG dj

Free.

The most important is to unbuckle , not necessarily to unsuperimpose .

Epilogue dj repeat plasm

- Death ; fatigue from the repetition of the sticky of the plasma in front of the face , which one is planned in advance , out of habit , and which we let come and happen . Fatigue of the repetition .

Epilogue Image of the woman , The despite and the law .

Image of the woman , The despite and the law .

For having continued , despite the fact that the others who made \odot feel guilty about loving women were women themselves . Representation of women always under attack , heterosexuality and art and truth , etc. even if they never really attacked , they always pretended , they were liars therefore . That was sufficient for the real attack , the one that break the image of the other sex , and thus break the happiness , the enthusiasm , the intelligence , the audacity , and everything else , by making to hate the woman . Hate because disappointed and thus tormented always for no apparent reason . Always in silence , they are always defended by a man with a strong Oedipus complex (desire for the mother , submission to the father) not resolved , some aggressive men , always young and smiling , and visibly stupid , yet convinced and proud to act in defending the woman , the mother , always dependents and violent . The fight was not to hate the woman and to recognize that these were threats , which formed the real attack as such . The threat is the attack , because the plague-ridden know well that there can be no sexual desire with threats coming from one or more women , a single threat , founded or not , is sufficient to break the entire earth , the future , a being , a lineage , an animal species , the universe . Perhaps this is the value of the past work of \odot , (of having done and written in such systematic contexts) of inflicted disappointments , of mental torture , of blindness , of cruelty of despair imposed , of feigned ignorances , of crude lies effective and manifest , of frustrations , of relentless moralism , always in the name of "the justice" or other "natural" , "common sense") . A value maybe greater than having discovered so many things . To have transformed himself into a self-satisfaction machine , to constantly reward himself for still touching the truth .
Castration complex , image of woman .

Yet , the Anamole of Cores of Earth is more important . The fear of \odot is to see what always happens , happened . That the same people who have thus prevented \odot from living and from discovering use the discoveries for continuing to destroy the image of women , and \odot with it .

It is that behind it , women are real . Behind the image . And happiness can be too . (to the extent that they are not empty bottles and relentless liars , patriarchal machines) . It is that , breaking enthusiasm , hope , ideas , etc. can make one suicidal , clearly . It is sufficient that someone to whom it happens , such attacks of de-sexualizing threats , needed help , support , or materials , money , or a little hope . Really .

The case of \odot is to seeing this repeated itself for 36 years , and intensified to the same proportion as \odot had needs .

" There is no forgiveness " etc. they shout . And they are really not capable of it . Horrible repetition , nightmare .

The luck of \odot is to have known , before the woman hit the man already down on the ground , the woman of this morning , the one from the supermarket , the manager , that she is a monster . In advance . \odot had written it .

And \odot keeps his being . \odot has some reasons not to feel guilty , that is what \odot said to itself . \odot would not have been able to without that , without writing it in advance . Therefore , luck and effort of \odot .

BD culpabilisation ("Putting the burden of guilt" / "To make feel guilt" / "Guilt-ridden" comic strip) - has been the muse to whom Corgone was dedicated , on the front page . Also known as MOC (Murder Of Christ) , (she is perhaps the older sister of Clío , the muse of the story)

The despite and the law .

she is the law

"The law is harsh. "

A Core Voc ; in addition ;
 « Choroid » (quite simply) , or « pterioide » (for "that which has wings")

A Core Return

A return of e. is made toward the Base/bottom/downward and toward the front/ forwards along each Wing .

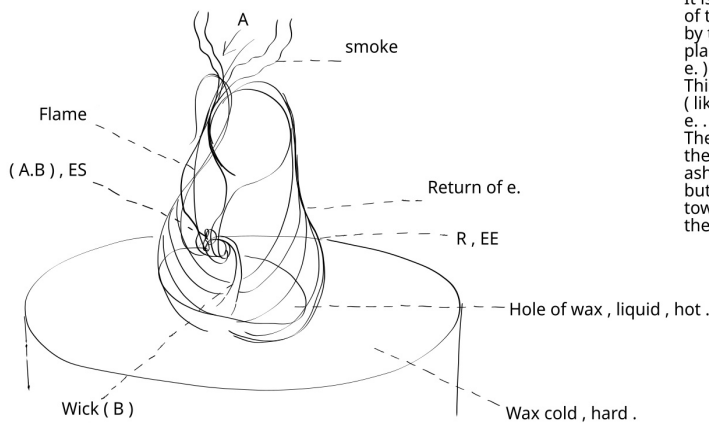

The e. , pushed by the BW towards the Top of the Core , re-descends via two kinds of wings even further to the External Edge than the EE of the Core . Weaker than the EE of the Core (which are hard and often very charged) , slightly shifted towards the rear of the Core , the EE of the Return (R, EE) seems soft , fluttering , and random . The BW (R,BW) are more open and return to the center of the axis of (A.B) , on the B side further than the Base of the Core , the lines downwards (towards B) (nearly towards the exterior of the Core) .

EN; Return, reverse
 FR.; Retour, revenir, reversion, ...
 Lat.; reversio, reventio, reventus, reversus, reversare, revertere, reverticulum, ...

(all begin with "R")

(☉ seen it on satellite image of AE,EA,CO . (Clouds around) (~2023))

Flogos Heat " hole of the Return "

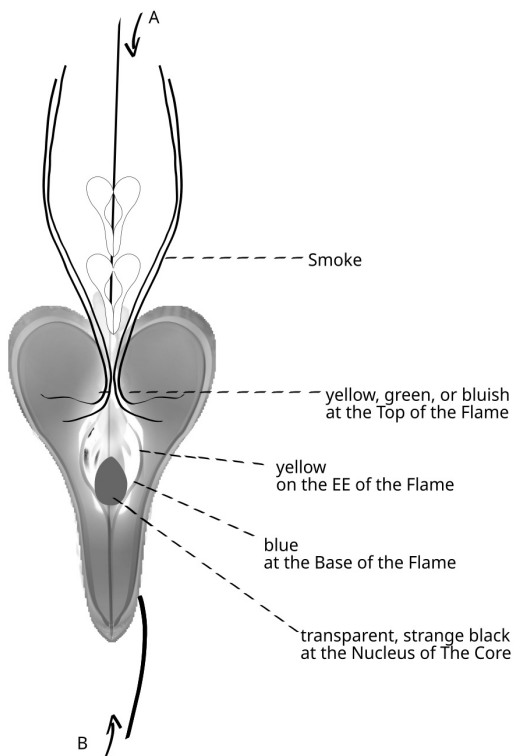

It is the Return of e. , which forms the hole filled with melted wax at the bottom of the wick . The e. descending (towards the B) because it is pushed upwards by the BW of the Core Flogos , and forced to re-descend because there is no place for it higher up (of lower density than the higher density surrounding e.) , therefore toward Flow B . On a candle , it is the wax under the wick .

This contact excites , sets in motion the liquid , hot , moving matter of the wax (like a swimming pool) , which has the shape of the open BW of the Return of e. .

The movement of these open BW of the Return can be seen with , for example , the ashes of the wick which float on the surface of this hole of wax . These ashes are pushed towards the wick (the arrival Flow B) quite gently , weakly , but pushed nonetheless . Once they reach the B , they are strongly pushed back toward the exterior of this hole , quickly , then they are gently pushed again by the Return of e. towards the B .

Flogos Smoke & Color

Smoke ;

Smoke forms in Core Flogos , as an Exit of Superposition of the Bigs Whirls . (C Flogos , BW , ES) .

This is what flows in from the EE of each Wing ; it is the excess of e. , which cannot Exit the Core zone , exit from under the BW , which has no other choice than to "force" a passage in the opposite direction of the BW , along the Top of the Flame , but remaining outside the EE of the A . The core pulsing at a rythme/mesure as the smaller Cores of the A flow in and make in movement the Wings in extension/contraction , the BW let the smoke pass only when the Wings are spread and high , at the moment/time of the Charge and Tension . At the moment/time of the Discharge , the Wings come near together and lower themselves quickly and strongly (like all the Discharges) , closing at this moment the exit/outlet of the smoke .

These two movements make that the smoke is in "crenellations" (FR.; "crénaux") , undulating with wide parts alternating with tight parts .

The smoke thus undulating more or less quickly , forms a band the width of the space between the BW , and of very fine depth , in the axis of the BW and of the Wings and not a single millimeter offset from this axis .

This undulating band is therefore thin , flat (at the level of the Top of the Flame , at the exit of the smoke) and aligned/axed . It can , then , only move laterally away from the center of the Flame (and of the center of the Core Flogos) because between the two sides of this thin band , there is Flow A and its smaller Cores , which divides it .

The smoke is a thin , flat , aligned , undulating band , whose two sides move away from each other as it rises .

(It is the "Hilus of the kidneys" , from where the urine exits , which showed this to ☉)

Color;

Flame Base ; Blue . It is maybe the EE of all the Core , not the EE of the Flame . (very close to the bottom of the Flame and to the Nucleus) (there is a small gap between this blue line , and the yellow one ; ~0.8mm) . The Flame is therefore maybe just what is yellow/orange , etc. , whose color melt downward . If so , what is blue at this level (the Base/bottom) , is the External Edge of the Core itself (as well as its BW when the Core Flogos is not big/large enough and deployed to form a Flame inside it) , and this blue color melt upward . (☉ needs to better look at the direction/angle of this blue line compared with the yellow one .)

Flame Top ; The top of the Flame is yellow , green , or blue , because , between the BW , there is the arrival Flow of A and its small Cores of e. . The e. is blue , the Flame is yellow . (Flame = Mixing zone between A and B , which superimposent themselves) When the top of the flame is yellow at a certain point , at a certain height , then , mixed with the blue of the arrival of A , it becomes , right here , green .

Nucleus ; At the very bottom of the Flame , at its Base , it is transparent , it is the Nucleus . Without point , (nut shaped , egg shaped , etc.) . (This transparent color , what is it ? hot ? density ? very excited or very calm ? Why matters forms itself elsewhere and not in this Nucleus of the Flogos Core ?)

LG Patch/strip Skull e.g., Galine , Rooster (of the hen) ♂

On the side of the skull (along the EE of C4), a big/large patch/strip of skin hangs down. It has the shape of C4 and of all the vertebrae of the neck and ribs. This is the charged part just before a "Cock-a-doodle-doo!". I.e.; before a roar. I.e.; before the Arrival of Superposition (AS, Atrium/ostium/entrance) of Chest (Pelvis C4) makes itself at the praecordia, passing first along the throat.

A; the same that Skull and others vertebrae.
B; Exterior
EE; along the beak, then the cranial arch.
BW; the red patch/strip of skin on each side.
Base; beak and tongue.
Flame; Unknown.

It is the BW of C chest (Pelvis C4) that make the wings of the birds. (While in wingless species, these BW make the pectorals.) From here, the wingbeat can be understood!

LG Flight bird

The EE push towards the front of the body (Core Chest (Pelvis C4)). But the A, continuing to inflow/influx, they come into direct and frontal contact with the EE of the A. The EE of the Core Chest (Pelvis C4) have no others choice than to continue to push and to deviate towards the outside of the A (and its EE); This is when begin the Big Whirls of the Core Chest (pelvis C4); A movement going first towards the outside then returning to the center of the incoming Flow A. To make move the body of the bird (Its Core chest (Pelvis C4)), the movement of these BW is done in step with the smaller Cores of the incoming A, and thus, like a chain, absorbs them (~ingests) in its praecordia. A bird's wing is in this BW. The more there is e. in the body (Core Chest (Pelvis C4)), the more the animal is lightweighted. (Because a charged body frees itself from the charge of e. of the earth, to a certain extent, and therefore from its gravity.) (This explains the sternum (praecordia/disseptum/plexus) of the bird, much more developed and thicker than other animals, which receives a much stronger and much more constant influx. Receives and researches it, aggressively, to move.) (The tip of the wing is the Exit of Sup. of the BW.)

It is a motor movement, natural, with the arrival of e. in front/face (of the Orgonome, but above of the Core (Core Chest (Pelvis C4))).

The feathers are in the direction of the BW.

In contradistinction to the "mammals" (FR; "mamifères"), these BW do not form pectorals (and do not need forelegs (to move)). In birds, these BW are detached, outside the skin of the Vertebrae (Vertebrae which are in continuation behind the Skull), and have their own skin (and hair/feathers).

In "mammals" these BW are under the same skin and interlinked with the vertebrae; they form the pectorals (and move less, it seems to \odot).

The Wing and the BW of the body (Core Chest (Pelvis C4)) can be more or less separated, that is to say, if the BW is larger than the Wing, it does not matter, it shrinks in size at the moment/time of the Discharge and Relaxation.

Charge; The Wings deploy/unfold themselves along the BW, which expand and move away from the center of the body. Influx of A has begun.

Tension; The Wings are fully deployed at their maximum, and push against the EE of the BW. The BW are big/large.

Discharge; The Base of the body (Core Chest (Pelvis C4)) has been tensed/bended/tighted/stretched to the hole of the Core, to the Flame (i.e.; to its belly, coming from above, through the kidneys, pelvis, lumbus, Base/bottom of the back), i.e., for a bird, that the ES has passed through its feathered tail, which it rose upwards just before the Discharge.

Relaxation; The BW are less charged of e., they shrink, continuing their Superimposition with the EE of the A, until they touch the A in praecordia (solar plexus/disseptum), the tips of the Wings of the bird are therefore at this level under the chest of the body, just at the top the Flame (their belly, i.e.; all the part of the vertebrae (ribs, sternum, etc., but without pectorals)). The Feathered tail re-descends. The Flow of A has ceased.

The more the bird flies, the less there is difference between the σ^{\uparrow} and the ν° , because the ν° uses a lot of the same Flow than the male, which passes in front of its body, rather than behind/rear, as for all females. (This explains why at "the time of the reproduction", the female eagle falls from the sky and the male follows her down (but him, he remains in a horizontal position).)

The less the bird flies, the more differences there are for the same reason; e.g.; Hen/rooster; peacock etc. (~ the male is forced to compensate the miss of the A from the sky, by a terrestrial A Flow, which is more.. "random".. (and its sexual Flow are in the same direction (pass by his praecordia too)). While the female does not need/research it samely (the amount of e. that she needs/research at her praecordia is less strong (because this need is divided and her Sexual Flow pass at the rear/behind her, to her pelvis C3).)

LG, OA Skull Core Anger (C4, Flame, C-1)

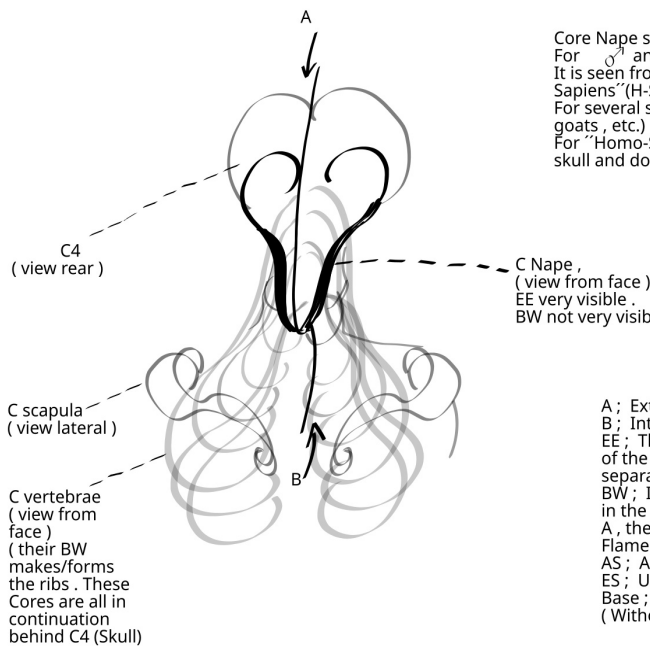

1 st Core of arrival . Head often lowered , to catch the B .
 Its BW are in the same place that C2 (smile) .
 Its EE descends obliquely along the nose , visibles , above the Flame of C4 .
 Its base is just above the nostrils .
 It is like the nostrils but bigger/larger , it has the same direction , it seems higher .

A ; Interior
 B ; Exterior , comes under the nostrils
 EE ; crease/fold of the nose to the cheeks
 BW ; cheekbones under the eyes (and bigger , under)

e.g. ; a growling dog . the "lips" (FR. ; "babine") , at the rear of the mouth , etc.

LG, OA Core Nape

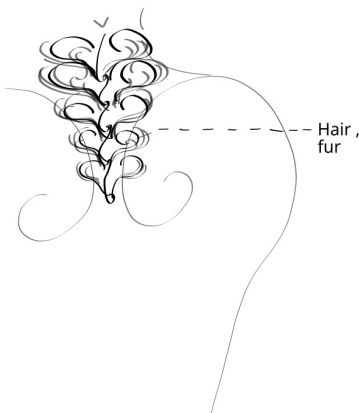

Core Nape supports the head (skull , C4 , etc .) , behind the neck .
 For ♂¹ and ♀⁰ ; it's the same .
 It is seen from the front when the Orgonom is seen from the rear/behind (For "Homo-Sapiens" (H-S) , or from above in most other Orgonom) .
 For several species , its BW makes/form/create the horns . (for the bulls , rams (FR. ; bélier) , goats , etc.)
 For "Homo-Sapiens" , the BW are smaller than the BW of C4 , so they stay/remain under the skull and do not form/create horns .

A ; Exterior . reverse of C0,C1,C2,C3,C4 and vertebrae
 B ; Interior . the same that the A of Vertebrae and C0,C1,C2,C3,C4 before it reach them .
 EE ; The two column of the Nape , they begin at the Top of the back (at the top and rear of the Chest) , then separate themselves a little (moving apart from each other) , then separate themselves even more , at their Top , at the beginning of the BW .
 BW ; In the skull ; unknown . At the exterior of Skull ; the BW makes the horns . Exactly in the direction of the BW of a Core ; going away and moving away the more of the Flow A , then coming back until they touch it . (in the interior of the curb of A .)
 Flame ; Between the two EE , until the Base .
 AS ; Arrival of Sup. (Atrium) unknown .
 ES ; Unknown .
 Base ; unknown . (behind the neck , maybe the top of the spine (vertebral column) (Without the cervicals) . It makes maybe a point on the head's nearest vertebra .

Orgonom view rear.

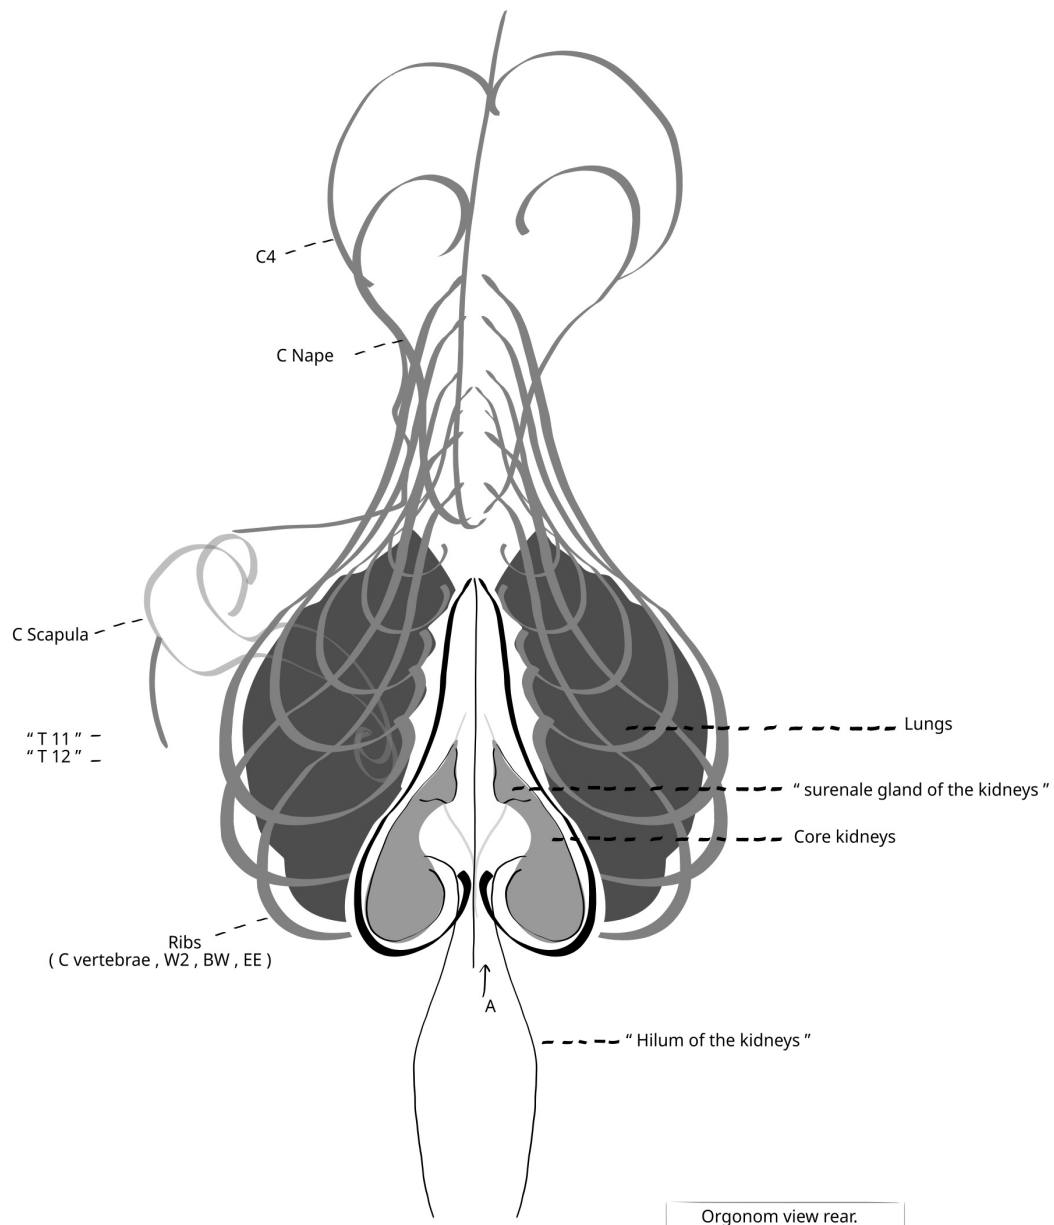

(SRC ; Seen on two french tibetan monks/priest , one ♂¹ and one ♀⁰ that have overtook ○ because he avoided a car taking all the street .)

LG, OA Hypothesis chest (Pelvis C4) , AS hair/fur e.g.; Lion

Hair on the chest , between the two pectorals .
 In shape of Core .
 This is the Arrival of sup. (the Atrium , the entrance , ostium) to the upper part of the chest , just before the praecordia (solar plessus / disseptum) .

(SRC ; Seen on a bronze statue of a "griffin" , 2m-tall , wings deployed/spread , seated .)

LG, OA Lungs (Cores Vertebrae, Big Whirls, Edge Interior)

The lungs fill the Edges Interior of the Big Whirls of the Cores vertebrae (those which are behind C4 (Skull)).
The ribs are the Edges Exterior of these Big Whirls of these Cores. (One rib per BW of a Core vertebra).

Each time that the series of Cores vertebrae are supplied/feeder with e., successively and in the same time and movement (the time and movement of the Charge and Tension (from the life formula; Charge, Tension, Discharge, Relaxation), the time and movement of Extendere (from the breathing in Intratendere and Extendere), these Big Whirls pulsate. They expand/enlarge, the Wings spread apart by pushing on their EE, then they come together again. The lungs do the same. The ribs too, but solidified over time, they are a little more fixed in a more or less average position between the maximum distance and the maximum proximity between the Wings (and therefore at the same time, between a very large (extended/expended) Whirl, or a small (contracted/closed) Whirl).

The lungs form a set of the Edges Interior of the Big Whirls of the Cores Vertebrae (each material formed by each of these Whirls, mixes itself with the material formed by the previous and the following Edges Interior of the Big Whirls).

Origin; Cores Vertebrae, Big Whirls, Edges Interior (AO, Crane, C Vertebrae, BW, EI)
Material; soft/flexible, light in mass (very light when charged with e.)
Color; more or less clear depending on the e. of the surrounding Flow B, etc.
Function; draw/attracts and retains the e..

LG, OA Core Kidneys

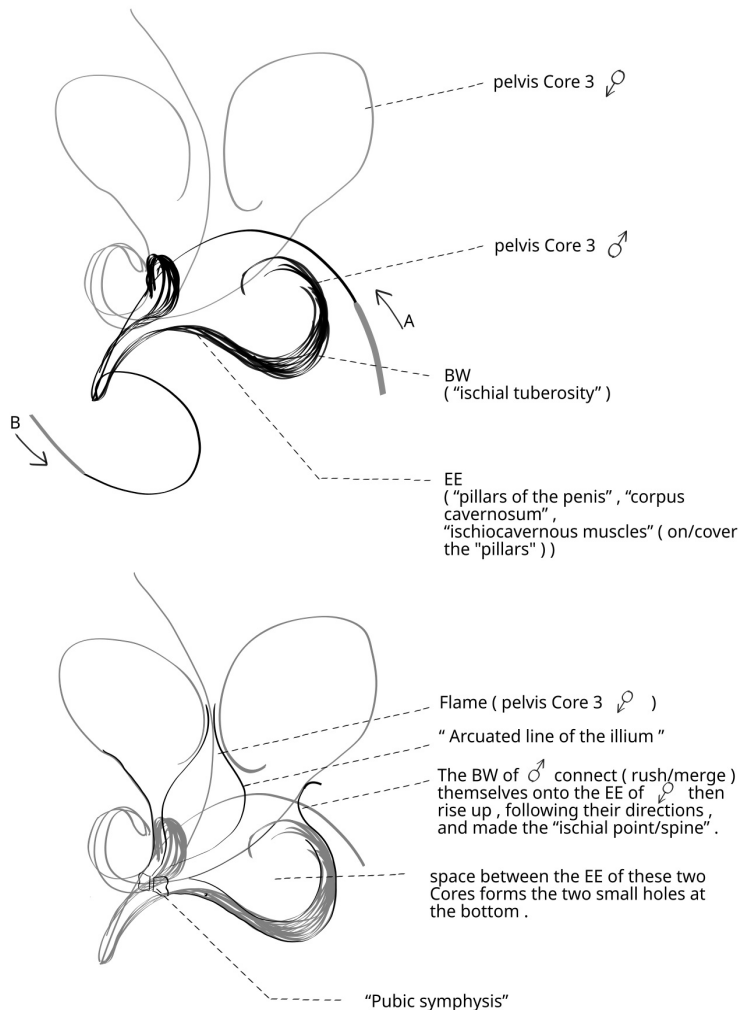

The kidneys form a Core. It is oriented upwards, in the same direction than Crane C0,C1,C2,C3,C4,C Vertebrae.
The Edges Exterior, where all the e. of the Wings passes, form the "surrenales glands of the kidneys". It is indeed, an influx for each Wing.
The "Hilum of the kidneys" is formed in Core Kidneys, Exit of Sup. of the Big Whirls.
The excess of the EE of this Core, therefore reaches this point, and forms the urine.
The "hilum of the kidneys" is the urethra, through which the urine passes before going into the bladder, then vagina or penis.

There is the other sex in the pelvis ! It remains a trace of its Core , of the ancestors/gills ! Absolutely incredible but it is true . Pelvis would be double , the EE are at the very bottom , at the base , (the two "strange" round holes are between). One sex uses one pair , the other sex uses the other pair . And the Orgonom carries what is not used ... from the previous generations, for the following ones.

If it is true it says a lot about the "gender" !

LG, OA Pelvis Core double male e.g. Homo-Sapiens

Voc ;

- " Upper opening of the pelvis " ; (between female W1 & W2 seen from above) (we can see in a male Orgonom that the Edges Interior of the BW separate/spread/move apart , not in a female Orgonom) , for female ; " much larger in women than in men " , for males ; " form of a heart in men and narrower than in women " .
- " Pubic symphysis " ; (a space in "cartilage" between W1,EE & W2,EE in males & females) , " the pubic symphysis is a articulation between the two pubic bones " .
- " Obturated foramen " ; (« strange » hole between male pelvis C3,W1-2,EE & female pelvis C3,W1-2,EE . At the very bottom of the pelvis)
- " Superior pubic branch " ; (female pelvis C3,EE)
- " Iliac crest " ; (female pelvis C3,BW,EE,Top) , " attachment point of the abdominal wall muscles . ; more robust or larger in men than in women " .
- " Sacroiliac articulation " ; (between the two BW of the Core female and the "sacrum") , " the articulations of men , including this one , are bigger than those of women " .
- " Gluteal surface of the ilium " ; (female pelvis C3,W1-2,BW view front) , " This is where the buttock's muscles attach to the pelvis " .
- " Postero-superior iliac spine " ; (female pelvis C4,W1-2,BW,EI) , " posterior end of the iliac crest " .
- " Ischiopubic branch " ; (male pelvis C3,EE) , " thinner in women than in men " . " thicker in men than in women , and equipped with a protuberance to which the pillar of the penis attaches itself " .
- " Ischial tuberosity " ; (male pelvis C3,W1-2,BW,EE) .
- " Subpubic angle " ; (angle between male pelvis C3,W1,EE and male pelvis C3,W2,EE) .
- " Great ischial incision " ; (space between male pelvis C3,W1 and male pelvis C3,W2) .
- " Ischial point/spine " ; ((male pelvis C3,BW) × (female pelvis C3,EE)) . (Like Italy with (EA,C3,W2,BW) × (EA,C2,W2,EE) , ~ and Mexico with (EA,C3,W1,BW) × (EA,C2,W1,EE)) , " this protrusion of the ischium is the point of attachment of the sacrospinous ligament of the pelvis " .

Etymology ; Ischium

LAT. ; ischia ; hip (late. scia)
 GR. ;
 ισχίον ; (1) hip bone where the femur fits, (2) fleshy part around the pelvic bone, hip, (3) protruding part of the buttock bone.
 ισχάριον ; hip .
 ισχάς ; (1) dried fig, (2) anchor .
 ισχάμιος ; that stops the blood .
 ισχάναω ; (1) to hold back , to stop , (2) to hold on , to attach oneself to .
 ισχίονρωγικος ; with broken hips .
 ισχίαις ; disease of the hip (e.g. ; articulations)
 ις , ινός ; (1) muscle , nerve , in the sg. designates the nerve behind the neck , at the nape of the neck . (2) fiber of the plants (3) vein of the metals . (II) strength , vigor , vehemence .

Etymology ; Anatomy

GR. ; ~ to cut into pieces from the bottom toward the up , dissection , ... (ana - tomos)

Core Pelvis double ;

The female Core is above of the male Core . The female Core is more visible . The male Core is constituted with the "ischium" . The thickness of the EE of both Cores is not the same following the sex . In a Orgonom male , the EE (the two "branches") of below is thicker . In a Orgonom female , the EE of above is thicker .

The "pubic symphysis" is a junction point of the two Cores , their Edges Exterior meet here / comes together here . Between these junctions, there is a space of "cartilage", it is where passes the Arrival of Flow A of the two Cores (and therefore of the two sexes/genders) . The base of these two Cores continues without forming bone ; it is the beginning of the genitals parts . Flexible and moving , made of flesh (muscle , fat , cartilage ..) , of fluids (blood , semen ..) and concentration of e. pulsating towards the Exit Sup. of Pelvis C3 . The female Core forms a Flame . The edge of this Flame is the " arcuated line of the ilium " . The Big Whirs of the male Pelvis C3 do not return toward the inside of the Core until they touch the Flow of arrival A , unlike the BW of the female Core . These BW therefore cannot form a Flame like the one visible in the Female Core . The " Ischial point/spine " is the resultant of a meeting point of (male C3,W1-2,BW & female C3,W1-2,EE) , (male C3,W1-2,BW rushes on female C3,W1-2,EE) , The BW can not terminate themselves (And then can not form a Flame in the Core , and then neither a Nucleus , and then male pelvis C3 can not carries a new birth .) . It is a point of resistance and problematic in male (The Flow of the BW use frequently another path , toward the Top of the Orgonom ,

The genitals parts of the male Pelvis C3 are made in their Edges Exterior of " pillars of the penis " (of " corpus cavernosum " and with " ischiocavernosus muscle " (which cover the pillars) . These "pillars" are the EE ; they goes "right" along the "ischium" and plunge into the "ischial tuberosities" . The "ischial tuberosities" are the BW . The " bulbospongiosus muscle " is the A (the Flow of Arrival of e. . I.e. ; the interior of the penis to the " glans ") . The A passes under the pubic symphysis .

It wasn't easy to find , because there are almost no lateral representations of the pelvis in the manuals of anatomy.

LG, OA ♂¹ Pelvis C2 Return testicles e.g.; HS

The testicles (the BW of the Core penis (Pelvis C2)) are behind the skin , behind the " pubic symphysis " . What are hanging below the penis , with the "glands" , is a Return of e . .

LG, OA Cores Vertebrae Pelvis/Skull

There is a change of direction of the "transversal" "epischopal" "point/tips" of the vertebrae . They are opposite each other between those of the "lumbar vertebrae" and those of the "cervical vertebrae" . Just like The opposite direction of the A between the one of the Pelvis and the one of the Skull/head (until the Cores ribs and kidneys) .

LG, OA Sacrum

Sacrum Nerves ... Vertebral Canal . ~ beginning with some "holes" inside through which they pass to the pelvis (and until femur believe) .

LG, OA Cores Vertebrae " vertebral canal "

Everything is "connected" to the "vertebral canal" . "Tendons" "yellow ligaments" , form its wall ; the vertebrae , the round and thick part , are not thick , are not round ; it is a Core , Base toward the Orgonom's front . This part is not empty , it is bony . The medulla (FR.; moelle) , is the "vertebral canal" and passes behind this bone , behind this Core , not inside , but passes through the "hole" of the vertebra (hole between this part , the "transversal" things on each side (the two small points directed towards Orgonom's front .)) .

LG, OA C temporal

A C under the brain , C temporal (the BW seems to be the BW of the Core Nape ..) " inferior something " " temporal " in the opposite direction of Skull C0 , C1 , C2 , C3 , C4 and of the several following . Base towards the Orgonom's rear (~ like Core Nape) , BW behind the eyes .

LG, OA Skull Return

C0 , C1 , C2 , C3 , C4 have a Return of e . . For example , It is formings the "hanging cheeks of old age " .

LG δενδρον Leaves

Some leaves can be approaching to the shape of a Core . But many are just of the shape of a Flame of a Core .

(e.g. , magnolia leaves . ~ Perfect Flames , in spikes of fewer than ten) . This means in this case here that the Wings of the Core are around , and bigger/larger .

LG δενδρον flowers magnolia

edit : error , the Cores are not in the direction of the length .

The stem , which will form a sort of pine cone from the flower stem , begins to grow in spring . It is at the end of a branch , toward the top , yellow , almost fluorescent ,

at the middle above the spike of Cores surrounding the Flames of the leaves .

the Base of the Cores come attaches themselves to it , then the BW will develop towards the exterior , face toward the bottom (they , alone , are visible) .

Ref. in a book about trees ;

Magnolia ; Laumiere , the king's younger brother , give his discovery to Pierre Magnol (1638 - 1715) , physician and director of the oldest botanical garden of france in Montpellier: ("simple leaves" , flowers in three columns/strate ; petals, sepals, petals. The cone begins passing by the top of the flower , a spiral structure in the cone-shaped fruits. "Quite a spectacle" , seed red ~2cm , birds disperse the seeds .

Magnolia grandiflora ~1711 from central europe . Arrived in Nantes by an 18-year-old captain returning from voyage. In a greenhouse, then in a garden. Widely planted in the South-West of France .

LG δενδρον clovers

Some species of clover have their 3 petals exactly of the shape of a heart , with the seemingly "pointed" tip in the center , on the stem .

LG δενδρον Hypothesis division

branch tip , if receives enough of e . , forms a Core , from which a wing emerges . This is division .

LS Ravage Language gender neutral

LAT. ; A neuter, a masculine, a feminine
 FR. ; A masculine, a feminine
 = They have removed the neuter, for example, for the adjectives
 = It have put an incredible mess. Everything that doesn't have a sex was forced to be masculine
 = Overpowering of patriarchy
 = Feminism of confusing of the words with moralism, confusion of the two sex, and perpetual recreation of the asexual. etc.

LS Ravage Language Exitation

FR. ; Exitation ; ~ set in motion by intensity, often sexual. Stimulation
 EN. ; Excitement ; ~ set in motion by intensity, often sexual. Stimulation
 EN. ; Exit ; Exit
 LAT. ; Exitio ; Exit
 Corgone ; Exit of Sup. is often sexual ; the discharge of the e. are aided by some sexual excitements .

= "sexual excitements" corresponds to "excitation Exit of Superposition"
 = there is a correspondance of language with the facts !
 = but the word is constantly attacked (denigrated, accused, etc.) ;

E.g. ; Saez, Damien, Nucléair, ~2005 ;

"[...]
 Moi j'veux du nucléair,
 Mon dieu que c'est excitant !
 [...]"

"[...]
 Me, I want nuclear,
 My God, it's so much exciting !
 [...]"

The word "excitement" was associated by the singer Saez to "Nuclear"
 Emotional Plague ; because the sexuality is conditioned by the worst that can happen and is therefore undesirable, and therefore impossible to wish and to achieve .

These words are also intentionally put in the wrong meaning (~ misinterpreted) ;
 The "Nucleus" would be "exciting"
 Complete Emotional Plague ; Because reality is the exact opposite of the proposition described and imposed by this song .
 It's what is "Exciting" that leads straight to the formation of the "Nuclear", of the Nucleus, of the seed, of the child. Through sexuality, then .

○ believed, for 20 years, that it was irony, some "provocation to shake things up". No. It's false, and it's a lie, and manipulation and many murder. (It's better when we don't know for sure, that the sexual remains in ambiguous, indeterminate, in difficult conflict, in the tragic, the epic, the comic, or even the absurd or the gentle, it doesn't matter. Exciting is a word important enough to specify that it must not be associated to absolute evil.
 Its twin is of course "desire" (but that one is literally consigned in hell with no chance whatsoever to seeing the light of day again.)

E.g. cornuatus ;

"[...]
 Moi j'veux de l'exitant .
 Mon dieu que c'est nucléairisant !
 [...]"

"[...]
 Me, I want excitement .
 My God, it's so much nucleairing !
 [...]"

LS Ravage Language hypothesis FR. words endind "e"

FR. ; All the words ending with "e" are feminine .
 Except for words that indicate a pleasure . e.g. ; sucre (EN. ; sugar), foutre (EN. ; cum) ("du foutre", not the verb), poète (EN. ; poet), prêtre (EN. ; priest)
 These words then end with the addition of "-esse", "-rie", "-ete"
 = impossible connection between pleasure and the feminine .

e.g. test ;
 "L'odeur d'une foutre d'une poète de 25 ans ou d'une prêtre de 31, le jour d'une nouvelle lune . Un vaggin comme une sucre ."
 (LAT. ; ~ "Odor fututum poeta viginti quatuor anni vel vates triginta uno, diem negra luna . Vesica siccut sucosa .")
